Dominion Bureau of Statistics

Infant Births and Deaths for March 1929 Announced

A preliminary report on births, marriages, and deaths for the month of March, 1929, for the nine provinces of Canada has been issued by the demography branch of the Dominion bureau of statistics.

In comparing the figures for March, 1929, with those of the same month for previous years, it should be remembered that for previous years the reports represent final figures, while those for 1929 are provisional. Attention is further directed to the fact that previous to 1926 the province of Quebec was not included in the Registration Area.

BIRTHS

The total number of births reported for the nine provinces of Canada in March, 1929, was 19,985, as against 21,368 for March of last year. All the provinces showed a decrease.

There were altogether 20,348 confinements. Single confinements numbered 20,057, resulting in 19,433 children born alive and 624 children born dead. Twin births numbered 286; in 260 cases both infants were born alive while in 18 cases one only was born alive, and in 8 cases both were born dead.

Stillbirths reported in February were distributed as follows: Prince Edward Island 7; Nova Scotia 29; New Brunswick 35; Quebec 216; Ontario 208; Manitoba 45; Saskatchewan 49; Alberta 37; British Columbia 33; making a total of 659. Stillbirths are not counted either as births or deaths.

MORTALITY

The maternal mortality rate computed on the basis of 1,000 living births was 5.7 for March, 1929. The rates for the same month in the preceding years were as follows: 1928, 6.8; 1927, 5.4; 1926, 6.9; 1925, 6.1; 1924, 6.0; 1923, 5.1; 1922, 5.7; 1921, 5.2. The mortality among male children under one year of age was 113.7 per 1,000 males born alive, while mortality among females was 88.8 per 1,000 females born alive.

HEARTLESS FAKERY

Of all the fraudulent raids made upon the purses of the credulous, none are so heartless as those charlatans who offer cures for incurable diseases or worthless remedies for maladies which might be successfully treated by competent practitioners. Probably the most conspicuous of this latter class of vultures is that which offers to "fit" glasses by mail—a dishonest proposition on its face, offering as it does to do a thing which cannot in the nature of things be done. To measure the amount of error in the refraction of the human eye requires the services of one skilled in such work; and this service cannot be rendered by mail, telephone or in any way save by the personal examination of the patient by one skilled in the profession. Not only do these fraudulent advertisers fail to relieve eye troubles, their victims almost without exception suffer actual injury, for the spectacles so sold are but a fair grade of magnifying glasses, which make print look larger; and, if so convinced that a benefit has been received, consultation with a competent optometrist may be deferred until real relief becomes a difficult and costly matter.

Grinding a pair of lenses to meet the needs of a pair of eyes neither of which is ever exactly like the other, is an intricate and exacting process; and the advertiser who offers to perform this feat without even examining the eyes to be fitted, and at a price often less than the actual labor cost of the work, is so manifestly a swindler that it is strange indeed that reputable advertising mediums accept their business, that a government owned post office department permit them to use the mails, and strangest of all that ordinarily intelligent men and women answer the advertising and patronize the advertiser.

Unfortunately there appears to be no way of successfully prosecuting these spectacle quacks, because of the technicalities behind which they shield themselves; and so it becomes the duty of reputable newspapers to issue a warning to their readers, that they may beware of the dangers which lie behind the preposterous promises of the grafter who promises to fit glasses by mail.

Heavy Flow of Gas Struck Near Oyen

OYEN, Sept. 20.—At 5 o'clock this morning the Fuego oil well, located on section 34, township 25, range 4, west of the fourth meridian, about 12 miles south of town, struck a very heavy flow of gas estimated at about 20,000,000 feet, dirt and mud being blown 200 feet in the air. Tools were taken out safely. The well is down 3,135 feet. Great excitement exists in Oyen, the residents expecting a crude oil strike at any time.

OYEN, Sept. 21.—The Fuego Oil Company's well, twelve miles out of this place, which came in with a strong gas flow yesterday is increasing in volume today, with oil dripping from the derrick. The well is now on top of the lime and it is believed that with deeper drilling a crude producer may be brought in.

President E G Law of the Fuego Company will leave Toronto for Oyen tonight, it is said here. A steady line of automobiles has been going to and from the well during the last twenty-four hours and intense excitement prevails here. The roar of the well can be heard half a mile away.

Noxious Weeds' Competition

In the recent essay competition on "Noxious Weeds and their Control," conducted by the Municipality of Lambton, No. 306, the following pupils from various schools were successful:—

GRADE IV
1st, Irene Dockery, Farrell Lake.

GRADE V
1st, Ella Grant, Princeton.
2nd, Amy Kirkeby, Princeton.
3rd, Alex McLaren, Farrell Lake.
4th, Edward Kirkeby, Princeton.
5th, Tilly Suelzle, Lillico.
6th, Emil Hein, Lillico.
7th, Clifford Stovel, Lillico.
8th, Maurice Davey, Lillico.

GRADE VI
1st, Rubell Kirkeby, Princeton.
2nd, Myrtal Molden, Princeton.
3rd, John Hall, Starland.
4th, Gordon Atkinson, Farrell Lake.
5th, Charlotte Sverdahl, Farrell Lake
6th, Pauline Stulberg, Annasheim.
7th, Kathleen Rogers, Starland.
8th, William Sverdahl, Farrell Lake.
9th, Walter Grant, Princeton.

GRADE VII
1st, Katy McCullough, Starland.
2nd, Hilda Jinks, Orlando
3rd, Flora Calder, Sentinel Hill.
4th, Margaret Wilson, Delia.
5th, Jessie Phillips, Delia.

GRADE VIII
1st, Louise Borel, Princeton.
2nd, Russell Grant, Princeton.
3rd, Leonard Molden, Princeton.
4th, Barbara Rogers, Starland.
5th, Albert Hawkins, Victor.
6th, Alberta Burrows, Lillico.

GRADE X
1st, Katherine McAuliffe, Craigmyle

Craigmyle News

A most enjoyable dance was held in Larson Hall last Friday evening for the purpose of raising funds to purchase a radio for the local Hospital. The hall was most prettily decorated, and a very large number of dancers were present. The sum of $80.00 was realized, and this should go a long way towards the desired object.

W. P. Landon who has sold his implement business here, although retaining his Delia establishment, left for his home at New Westminster, B. C., on Monday morning by car, and was accompanied by Alfred Farrow, whose home is also there, and who has been visiting here for the past four weeks.

Mr. and Mrs. Stanley S. Howard are being congratulated on the birth of a daughter at Craigmyle Hospital on Tuesday, 24th inst.

Geo. W. Delsing won the J. O. Miller Cup, emblemic of the local Golf Club Championship for the 1929 season, on Sunday last, when he defeated W. B. Anderson in the final round.

The local United Church anniversary service will be held on Sunday, 13th prox., when Rev. H. D. Leitch, M.A., of Drumheller, will be in charge, and the annual chicken supper will be held in the Church basement the following evening, and Rev. Mr. Leitch will deliver a lecture afterwards.

Sentinel Hill Items

The Springwater School Fairs' Association held their annual fair at Sentinel Hill School on Friday, Sept. 20th. A splendid number of interested parents and friends of the boys and girls came to see their work. Ideal weather prevailed. Four judges, two ladies and two gentlemen from Olds, and P. S. I. Thorbur of Hanna, gave the awards in the different classes, to the satisfaction of those concerned. Miss Florence McKay, teacher at Springwater, is to be congratulated, as her pupils won first in the singing contest and also in P. T. exercises. Sentinel Hill School won second in P.T. and Newport second in singing.

Rev. G. Steele, of Delia United Church, held service in the school on Sunday afternoon.

Mr. G. E. Hewson and son, J. C., motored to Edmonton on Monday, where J. C. will attend the Alberta University.

Threshing is about completed in this district.

Mrs. Wm. Morrison and Mrs. Foster attended the W. I. Conference at Wayne on Wednesday, September 18. Mrs. Foster was official delegate from S.H.W.I. They report a very good program but few in attendance.

Expert Emphasizes Dangers of Gasoline

"People do not realize that the energy developed by the vapor of one gallon of gasoline is equal to 97 pounds of dynamite," Major A. M. Barry told the members of the Province of Quebec Safety League at a meeting in Montreal recently.

Major Barry read a paper dealing with some of the dangers of handling gasoline.

The speaker explained the dangers of empty gasoline drums or of any drums which had contained oil or volatile liquids. The holes in these drums were not sufficiently large, he said, to allow the gas generated by the gasoline or liquid to evaporate, and if heat reached the gas or a flame was applied to it, a violent explosion was certain to follow. The danger of these drums was such that the company of which he was president refused to receive them for repairs.

In talking of the dangers of gasoline handling in regard to automobiles, Major Barry said that an explosion of the gasoline tank was bound to be serious, and he advised all automobile owners to see that attendants serving them gasoline should not be smoking, so as to protect themselves and their families.

Passing to the subject of the transportation of gasoline through the public streets and highways, Major Barry said: "Most of the large oil companies and several manufacturers have given this problem serious thought. Also such organizations as the National Fire Prevention Association and the National Board of Fire Underwriters with the manufacturers and oil companies on the matter. As a result there is today a truck tank that is nearly one hundred per cent safe. But the smaller companies and the independent jobbers generally have an equipment that is an absolute menace to the lives and property of our citizens."

The speaker then passed to discussing the danger of gasoline in the home and here gave the members a valuable piece of information to take home to their wives.

"If you take a woollen article and an article of silk," said Mr. Barry, "and rub the two together while wet with gasoline, you will immediatly have fire. During the operation of cleaning clothes with gasoline a large volume of gasoline vapor accumulates in the room unless it happens to be well ventilated. The vapor will travel across the room, to say, a coal stove fire, the pilot light of the gas stove or some other naked light, and immediatly this vapor will ignite. The flames flash back to the gasoline container and to the clothes, and immediately there is a bad fire with the person or persons in the room surrounded by a hot, destructive flame; then, unless immediate assistance is given, there is a loss of life. In organized communities there is severe fire damage and explosion damage, but in unorganized communities there is the destruction of property by fire.

About the only art that can be developed without genius or a tutor is living.

As the world grows wiser and wiser, it finds more and more ways to make a fool of itself.

It would increase the volume of knowledge if a man knew at 25 what he thought he knew at 18.

HAND HILLS ECHOES

[Received too late for insertion last week]

F. L. McFadden left for Drumheller Hospital last Sunday, and is under the care of Dr. Henderson, who operated on Mr. McFadden's eye on Tuesday. We hope that Mr. McFadden will soon be O.K. again.

The Misses Dorothea, Jean and Helen Richardson left the first of the week for Moscow, Idaho. As soon as Mr. Richardson has his grain hauled to the elevator he will also leave for Moscow to spend the winter.

The teacher for Blair School this year is Mr. A. Howard, of the Rainbow district. He has an average attendance of 15 pupils, from Grade 1 to 9.

Mr. P. H. Courtney had the misfortune to have his lip cut, and some of his teeth knocked out while working on his combine a few days ago. Threshing is just about completed in the Hand Hills (until next year).

A large prairie fire was raging on Saturday evening in Mr. Cowen's lease, south-east of the Horse Track lands, but was soon got under control, as a large number of fire fighters turned out.

Sentinel Hill W.I.

The regular monthly meeting of Sentinel Hill W. I. was held at the home of Mrs. E. M. Herman on the 19th inst. The attendance was smaller than usual, owing to so many being busy threshing. The meeting opened with singing of "O, Canada!" and the repeating of the Creed, after which business matters were dealt with. In connection with the bazaar which takes place on October 25th, a handkerchief shower was held and a fine lot of dainty "hankies" were received.

Mrs. J. G. Reed, of Munson, very kindly sent a paper on "Child Welfare in other lands," but same was held over to be read at the next meeting.

Mrs. E. W. Foster, who attended the Constituency Conference at Wayne as our delegate, was favorably impressed with the work of the W.I., and will give her report next month.

Roll Call was answered with "Harvest Time Menus." After adjournment a delicious lunch was served by the hostesses, Mrs. Herman and Mrs. E. Pfiefer.

The next meeting will be held at the home of Mrs. R. A. MacPherson on October 17th. All the ladies in the district are cordially invited.

ADVERTISE IN THE "DELIA TIMES," and find a buyer for what you have to sell. Phone 17.

Byemoor Briefs

The auction sale, held at Geo. Leith's farm on 5th inst., was well attended. The bidding was brisk, and there was keen competition most of the time. All the horses, cattle, farm machinery, etc., fetched good prices. W. C. King, Delia, was the auctioneer.

The Delia ball team visited Byemoor on Sunday, 8th inst., and played the local team. The game proved very snappy throughout, and ended with a score of 11-7, in favor of Delia.

Mr. and Mrs. Geo. Leith left Byemoor on Wednesday, 11th inst., for Calgary, where they will reside for the next two months before leaving for Liverpool, England, to make there home there. Mr. Leith is one of the old-timers of Byemoor district, having taken up land here in April 1909. Everyone regrets to see the family leave the district, and wish them every success in their new home.

A very pleasant afternoon was spent on September 13th, at the home of Mrs. J. Grainger, in honor of her birthday. The guests were: Mrs. Winkles, of Heart Lake; Mrs. Wood, Mrs. F. Nicholson, Mrs. John Jameson, of Byemoor; and Mrs. Jens. Mortinsen. Music and singing were indulged in after which a dainty supper was served by the hostess. Everyone wishes Mrs. Granger "Many happy returns of the day" and hoped to come again next year.

A very enjoyable evening was spent at the home of Mr. and Mrs. D. Ferguson, of Byemoor, recently. Quite a crowd of young people came from around their old home and a number of young folks from near Byemoor. Singing and dancing were enjoyed, after which dainty refreshments were served. The party broke up in the "wee sma' " hours, the guests all reporting the best of times.

'Fresh from the gardens'

Removal Of Friction and Strife

The setting up of the organization of the League of Nations had, as its main object, the removal of those racial religious, economic and political animosities and suspicions which kept the nations of the world, and particularly the nations of Europe, in constant turmoil and ever on the verge of war. Because of the bitterness and suspicions thus kept alive and active, all nations armed to the teeth, one against another, while a multitude of restrictions and prohibitions to international intercourse were established.

Not only were national boundaries marked by lines of fortifications, but intricate systems of espionage were maintained, passports were required of people passing across boundary lines, different gauges were built by railways, customs posts established everywhere, and hostile tariffs imposed by one country upon the products of other countries.

Thus were the people of each country kept warned against the possible enmity of other countries, suspicions were never allowed to die down, a constant state of friction prevailed, and strife was uppermost in every mind.

It was as inevitable as the rising of the sun that such a state of mind among the peoples of the world must end in some gigantic conflict. It came in 1914, and all but ruined mankind, and nearly destroyed civilization. The statesmen of the world realized that unless something was done to remove these suspicions and causes of friction, it would be only a matter of time until another and still more colossal struggle would take place.

When it became operative, the League of Nations further realized that, if disarmament was to be brought about, armies and navies reduced, and the huge drain on mankind for warlike purposes ended, the real causes of war must be removed, suspicions lulled, and a true understanding developed among all people. In other words, that a proper spirit of international goodwill must replace the existing narrow and blatent nationalism rampant everywhere.

The League, therefore, set up the International Labor Office, with the object of improving the lot of workers in all countries, and to raise the standard of living of the masses of the people everywhere, realizing that, if people are contented and happy, and living under a fairly high standard, they will not be suspicious or jealous of others, nor quite so ready to plunge into war to better their own condition.

In like manner, the League has devoted its attention to many causes of sorrow and unrest in the world, and it is persistently seeking improvement in all departments of the world's work and methods of living.

It is because of many really great achievements in these directions, coupled with the horrors of the last war, that the minds of all people are today more open to receive and support plans for disarmament, and that, with the passing of the years, the prospects for permanent world peace become brighter.

World statesmen are now convinced that the greatest danger to the world peace is to be found in the realm of economics, in the rivalries of nations in the field of trade and commerce. This is the age of big business, the age of mechanics, mass production, and of endeavour to sell the surplus products of one nation in the markets of other nations. While this has been more or less true of all ages, and wars have been waged in order to seize territory with a view to later commercial exploitation or development, today the urge to secure new and larger markets is the strongest ally of those who clamor for large armies and huge navies.

Premier Briand's proposal for a United States of Europe is economic, rather than political. We venture to say it is not aimed at Great Britain, or the United States of America, but is designed to remove the multitude of restrictions which prevail all over Europe, isolating one nation from another, and doing economic hurt to all of them.

So, too, the Franco-British proposal for a two-year tariff holiday during which all nations would agree not to raise their tariffs, and meanwhile participate in a sincere international conference to determine ways and means whereby, without sacrificing the interests of any one country, a larger measure of freedom in trade and commerce, and intercourse generally, could be devised.

The world is coming to realize and fully understand that trade barriers are now the most prolific cause of misunderstanding between nations and the cause of more friction and heart-burning than anything else. Even Canada and the United States, which live side by side in such mutual understanding and goodwill, are more frequently disturbed over tariffs than any other one thing, or all other things put together.

The ideal condition of world free trade may be an impossible dream for some generations to come, but surely much of the present friction can be removed, and the world begin to trace the path that leads to the ultimately desired goal.

Hobbies For Boxers

Famous Sportsman Have Varied Ways Of Amusing Themselves

Famous boxers all seem to have some outstanding hobby. Quite a fuss was made when it was known Gene Tunney was exceptionally fond of literature. It is said that Bob Fitzsimmons had a wonderful way with him in the handling of wild things. He thought nothing would bite him intentionally. He believed he could hypnotize any of them, and once tamed a bear, and one time had a pet lion, of which he was very fond. Jim Jeffries was also very fond of animals and was a great hunter. He was always in the mountains hunting bear, deer, mountain lions or small game. On one Alaskan trip he got a dozen big bears with deer, moose and mountain sheep. Nowadays, Jeffries grows roses and is an expert at the job. What a contrast! Jack Dempsey is also fond of hunting. He likes potting away at any kind of game, big or small. And he is passionately fond of dogs. So could one go on.

Visitors to the home of Charles Darwin, in Kent, England, may now see the chair and writing board at which Darwin worked while writing his famous theory of evolution.

A penalty for failing to vote in elections is exacted in Czecho-Slovakia.

Tired Feet

Bathe with **Minard's** in warm water, rubbing into aching parts. Soothing and relieving.

MINARD'S "KING OF PAIN" LINIMENT

Diamonds From Sugar

Scientist Produces Sparkler That Was Made In Laboratory

Predictions that "large and beautiful real diamonds can be made by man, was made to the American Chemical Society, at Minneapolis, by Professor J. Willard Hershey, of McPherson College, McPherson, Kansas.

He laid on a glass slide a tiny crystal, the size of a grain of sand. He said it was a real diamond, produced in his laboratory at McPherson. It was made from ordinary pure table sugar subjected to pressure estimated at ten tons to the square inch.

Worms in children, if they be not attended to, cause convulsions, and often death. Mother Graves' Worm Exterminator will protect the children from these distressing afflictions.

Horse Provided a Thrill

Children In Venice Saw One Recently For the First Time

All Venice hung over the Ponte di Paglia to look at a horse. It was quite an ordinary horse—but the first seen in Venice for many, many years.

The much-admired beast belonged to M. van Brommel, a young Dutchman, who has just arrived from Belgrade on horseback.

Venetian children were radiant, for, except horses in statues, this was the first that most of them had seen.

To Increase Maple Sugar Production

The Quebec Department of Agriculture is co-operating with the Maple Syrup and Sugar Producers' Association in a plan to raise the annual production of syrup to 60,000,000 gallons. This is almost twice the present amount, the ouptut in 1929 having been 32,000,000 gallons .

The chrysanthemum was introduced into England from China about 1790.

Greatest Wheat Exporters

Canada Stands At Top Of the List As Exporter Of Wheat

Canada stod first as an exporter of wheat during the 1927-28 crop year, with exports of 255,062,278 bushels. The United States came second with exports of 168,307,000; Argentine, third with 155,258,000 and Australia foruth, with 80,980,000 bushels. The report of the Bureau of Statistics also shows that for 1927-28 the world's wheat production was 4,815,400,000 bushels, of which Canada produced 479,665,000 bushels ranking third with Russia in the first place and the United States in the second.

RHEUMATIC PEOPLE CAN OBTAIN RELIEF

By Enriching Their Blood With Dr. Williams' Pink Pills

Rheumatism is a disorder of the blood. It attacks people when the blood is thin and impure, thus setting up inflammation of the muscles and joints. Wet or cold weather may start the pains of rheumatism, but is not the cause. The cause is in the blood. Hot applications or rubbing with liniments may ease the pain, but do not reach the cause and the pains are soon back again. To get rid of this most painful trouble you must treat it through the blood and for this purpose nothing else can equal Dr. Williams' Pink Pills, which from first does to last actually make new, rich blood, thus driving the rheumatic poisons from the system. Mr. Henry E. Amiro, Lower East Pubnico, N.S., tells what these pills did for him. He says:—"I had an attack of acute rheumatism so bad that I could not walk a hundred yards without so much suffering that I would feel faint. I could not do the least work, and any movement caused great pain. I was under the care of a doctor but did not improve much. Then reading of a similar case in a newspaper I decided to try Dr. Williams' Pink Pills. By the time I had used three boxes, there was no doubt they were helping me. I took altogether about a dozen boxes when I was entirely relieved of the trouble, able to walk four miles to my work, chop wood all day, and then walk home again. To anyone suffering from rheumatism I can strongly recommend Dr. Williams' Pink Pills."

You can get these pills through any medicine dealer or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

A Peace Disturber

Automobilists Who Toot Their Horns Constitute a Public Nuisance

A Toronto youth has been fined $5.00 for disturbing the peace by tooting his horn to notify the girl friend that he had arrived in front of the apartment house and was waiting to take on cargo. Most persons will be glad to hear this. Horn tooters who refuse to get out and walk up to the door to get their passengers are a nuisance in every urban community. One way to get rid of them would be by the authorities declaring an open season on them and permitting the neighbors to take pot shots at them when their presence is detected by their honking, but a less exciting way would be to have them outlawed by bylaw. —Regina Post.

When Asthma Comes do not despair. Turn at once to the help effective—Dr. J. D. Kellogg's Asthma Remedy. This wonderful remedy will give you the aid you need so sorely. Choking ceases, breathing becomes natural and without effort. Others, thousands of them, have suffered as you suffer but have wisely turned to this famous remedy and ceased to suffer. Get a package this very day.

Best When Left Alone

No Need For Discussion About Anglo-American Relations

There is no real necessity for Great Britain and the United States to discuss their navies at all. Every sane American rejoices in the numbers and efficiency of the British Fleet. Every sane Briton regards each addition to the American Navy as an extra reinforcement of the world's peace. Where there is no ground for quarrel there can be no question of hostile competition. Anglo-American relations are always at their best when they are least discussed.

Winnipeg Industries

Recent new industries established in Greater Winnipeg include: fox food, confectionery, pleating and art silk painting, corrugated boxes, and toilet preparations.

The Supervisor—Why did you give that party the busy signal? There was no one on the line.

The Operator—I was busy—doing my nails.

Apples imported into England from Australia must in the future measure not less than two and one-quarter inches in diameter.

Fear of death shortens the average span of life, according to a French scientist.

Many have been relieved of corns by Holloway's Corn Remover. It has a power of its own that will be found effective.

The new China is going in for broadcasting. It will be difficult to distinguish a Chinese concert from static.

Minard's Liniment—The King of Pain.

DIRECTS PROPAGANDA

A. B. Halatoff, president of board directors of Soviet State Publishing Trust, who is largely responsible for Bolshevist propaganda in India and China.

Survey Of Dairy Industry

Data On Dairy Cows In Saskatchewan Soon To Be Available

Making Saskatoon his headquarters in his survey of dairy industry for the province of Saskatchewan, Dr. George Misner, of the Department of Agricultural Economics, at Cornell University, announced that the actual taking of records will be completed about the end of this month. Figures will then be available on dairy cows on about 550 farms in Saskatchewan. Particular care has been taken to secure a fair average of the herds.

Dr. Misner has been furnished with a staff of assistants in the survey work by the Department of Agriculture, at Regina. Although figures as to the cost of producing and distributing milk in Saskatchewan will be ready soon, Dr. Misner does not think this will exhaust the usefulness of the data gathered. He expects the department will have further work when this is completed. The survey is financed from the surplus of the Canada Wheat Board of 1920, which was set aside for agriculture research .

Take Pride In Canada

Only Necessary To Travel the Length Of This Dominion To Stir Up Patriotism

Proud of being a Canadian before he took a recent trip to western Canada, Dr. C. B. Oliver, of Chatham, Ont., is even more proud of his nationality, since he has once more travelled through Manitoba, Saskatchewan, Alberta and British Columbia. The more he sees of the Dominion, the prouder he is of Canada. His patriotism needs no artificial stimulus. All he requires is to see his Canada. Every citizen of this Canadian nation has a perfect right to be proud of his country. The more a person travels in Canada, the more he appreciates the wealth of this land; and the more the Canadian travels in other countries, the more he realizes that in Canada he can find facts and opportunities to equal anything he sees elsewhere.—Border Cities Star.

Wheat Marketing On Protein Basis

Dr. Robert Newton, professor of field crops, of the University of Alberta, has been asked by the National Research Council, of Canada, to make investigation of the possible reception which would be given in Europe to a system of marketing wheat on a basis of protein content. The report will be prepared for the next session of Parliament.

It Has Many Qualities.—The man who possesses a bottle of Dr. Thomas' Eclectric Oil is armed against many ills. It will relieve a cough, break a cold, prevent sore throat; it will reduce the swelling from a sprain, relieve the most persistent sores and will speedily heal cuts and contusions. It is a medicine chest in itself.

To fit up an hotel with running water, hot and cold, in every bedroom means an average layout of about $125 a room.

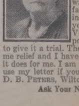

A census is to be taken in more than 200 countries and colonies next year.

Rubber can be obtained from more than 300 varieties of tropical trees.

FARMER'S WIFE GETS STRENGTH

By Taking Lydia E. Pinkham's Vegetable Compound

Wilton, Ont.—"I am taking Lydia E. Pinkham's Vegetable Compound through the Change of Life. It helps me and I cannot praise it too highly. I was troubled with heat flashes and my limbs were heavy so I could hardly walk to do my farm work. I saw in the newspapers your ad about the Vegetable Compound and thought to give it a trial. The first bottle gave me relief and I have told others what it does for me. I am willing for you to use my letter if you choose."—MRS. D. B. PETERS, Wilton, Ontario.

The British Constitution

From a Speech Given By Rt. Hon. J. H. Thomas

Not many years ago I was an engine-cleaner, engine foreman and engineer. I left the footplate to take my place in the British House of Commons, that old, revered institution which, after all, stands as the monument of British justice, and my fellow members did not look upon my entry or that of my colleagues with misgivings or suspicion. There was no inquiry as to my birth or my wealth, but the House welcomed us only so far as we could contribute to the assembly what was best in us. That is why today I am proud to champion, proud to defend it, and I never apologize for saying that our constitution is the broadest and best in the world. (Hear, hear.) Because it is the broadest, because it is the best and gives a chance to the humblest, it is our duty to see that that constitution is not only preserved, but is handed down to those who follow us unimpaired and even better than we found it. Therefore, whatever your views of our politics may be, whatever differences politically may come in between us, I want to say quite clearly and definitely that so far as Empire problems are concerned, and so far as the maintenance of the British Empire and maintenance of the privileges of its citizens are concerned, this old British Commonwealth is in as safe keeping with the Labor party as with any of our predecessors or any who may follow.

A Corrector Of Pulmonary Troubles.—Many testimonials could be presented showing the great efficacy of Dr. Thomas' Eclectric Oil in correcting disorders of the respiratory processes, but the best testimonial is experience and the Oil is recommended to all who suffer from these disorders with the certainty that they will find relief. It will allay inflammation in the bronchial tubes.

Women In Airplane Factories

Are More Adept At Finer Adjustments Than Men

Much of the most exacting work in the construction of an airplane is done by women workers. Builders have found that women are most adept at shaping and sewing the fabric covers of wings and making certain delicate adjustments on the wings and struts of airplanes. Also, they are often called upon to plan the decorations of the interiors of planes built on special orders.

Major Reuben H. Fleet, president of Fleet Aircraft, Inc., of Buffalo, has many women workers in his plant. "We find that women can do the complicated work of covering the wings and assembling ribs and fitting them more accurately and in less time than men," he said.

Accelerated Schedules Feature C.P.R. Fall, Winter Time Table

New Schedules To Be In Effect Sunday, September 29th

The fall and winter time table of the Canadian Pacific Railway which will go into effect over the system on the last Sunday of September, features many important changes in passenger train service, among which is the speeding up of trans-continental trains, saving the coast traveller a matter of ten hours. These improved schedules are in line with the Company's policy of keeping abreast of the times and providing the best possible service to its patrons. The Company's ticket agents are now in possession of complete informaiton, which is available to the public upon application.

Will Establish Sanitorium

The government of Manitoba has decided to devote the $250,000 voted at the last legislature, to establishing a sanitorium for tuberculosis children in Winnipeg.

Hindu surgeons in early times used more than 100 different surgical instruments and performed difficult operations.

People in the United States use up more than a million lead pencils each year.

Mr. Baldwin's Ministry was the thirty-fifth since April 24, 1827.

Stop Colds with Minard's Liniment.

Daring Stunt Flyers

"Four Musketeers Of the Air" Defy Death At Camp Borden

"Four Musketeers of the Air" is the title accorded a small group of Canadian aviators who are rapidly demonstrating to the world that while Canada's air force may not be the largest, it is very nearly, if not the best, at its own particular game.

The Musketeers are Squadron Leader C. McEwen, M.C., Flight Lieut. David A. Harding, famous rugby player, Pilot Officer E. McNab and Pilot Officer E. A. McGowan, all four being stationed at Camp Borden, and flying the Canadian army's Siskin pursuit 'planes

At various exhibitions both here and in the United States, the Musketeers have thrilled thousands with their antics. At Cleveland, Ohio, recently, they stole the thunder from many more famous fliers who had performed there, and their performances were regarded as one of the most remarkable ever seen in the United States.

Camp Borden features individual stunting at the finishing part of a novice flyer's education. It is a means of obtaining perfection in the control of an aeroplane, and while formation flying is also taught and practiced, the individual practice of putting an aeroplane through its paces is more strongly endorsed.

One of the Musketeers' favorite stunts is a very spectacular one. The 'planes, starting in formation at around 3,000 feet, suddenly nose down. At terrific speed, with motors wide open, they spread out, fan-shaped, and suddenly zoom up. At the peak of the climb, with the motors nearly stopped, the 'planes gradually fall over backwards and fly for some distance upside-down.

Sheep Ranching Expanding

Industry Is Showing Promising Development In British Columbia

The sheep industry from a ranching point of view shows signs of development in Western Canada, particularly in British Columbia, states the Department of Agriculture. Last fall upwards of 10,000 head of ewe stock were bought in Alberta and shipped to the interior points of British Columbia. In 1928, the demand for range ewes exceeded the supply and the demand promises to be equally as good this year.

Had Been There

"Travelled!" said a sailor in a train to a passenger who had questioned him. "I should think I have. I've been all round the world; over an' under it, too. There ain't many ports I don't know the inside of."

"Why, you must know a lot about geography."

"Yes, we did put in there once, but only to coal the ship. 'Tain't much of a place, what I remember it."

Bananas are banned in Italy because they do not grow in that country or in any of its colonies. This is protection carried out to the limit.

A Real Necessity

"Don't Get Excited", Club Would Be a Boon To World

There are clubs and societies for every conceivable purpose under the sun, yet one of the most obvious needs of Americans today is left entirely uncovered. What we need is a don't get excited club whose object shall be to keep people from coming to the boiling point when it isn't necessary.

The trouble with most of us is we get too excited over little things and not excited enough over the big ones. Agitation, loss of temper and surrender of self-command over the trivial annoyances of life are a sheer waste of time and energy. In most human affairs more can be accomplished through poise and placidity than through effervescence and seismic phenomena.

If a don't-get-excited club could be so organized as to conserve all the human voltage that now goes to waste through needless excitement it would mean that mankind had reached the suburbs of a new era.

Postal Revenue

Now On a Level With What It Was Three Years Ago When Letter Rate Was 3 Cents

Postal revenue is now on a level with what it was three years ago despite the return to the 2 cent letter rate (in Canada, the United States and Mexico) in 1296, and that within the Empire on Christmas day, 1928. For the fiscal year ended March 31st, 1926, the revenue was $31,025,000, and for the fiscal year ended March last, $31,170,000.

Increase In Water Power

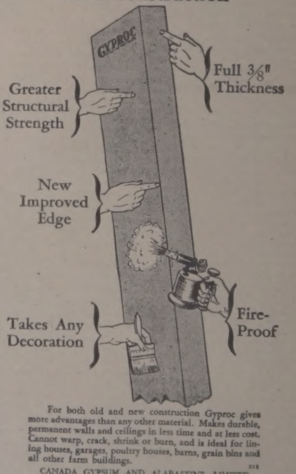

The mid-year review of water power progress issued by Hon. Charles Stewart, Minister of the Interior, shows almost 200,000 h.p. added to the Dominion's total within the half year.

Reindeer in Alaska are proving better travellers than horses or dogs, particularly since they are good at finding their own food.

Farmers In France Are Worried Over A Record Wheat Crop

Paris.—The French farmer is facing the future with disquiet. His wheat crop, passing all expectations, is the greatest known. Never before has the average yield been so high. In the wheat-growing areas of central France the crop is nearly 50 per cent. higher than last year. With the exception of the north and east, there is an increase in every region; the total crop being estimated at roughly 210,000,000 bushels, at 60 pounds to the bushel.

Yet, while the grain-grower of the Canadian West is regarding his short crop with philosophy, the French farmer is finding in his own abundance a matter for alarm. For speculation, following successive forecasts of increasing optimism, has sent the domestic prices down until they now stand at a figure which, according to Jules Gauthier, president of the National Association of Agricultural Associations, cannot afford a profit to the farmer.

Within a fortnight the domestic price has dropped from 163 to 135 francs a quintal. Gauthier holds that the home price of from 150 to 160 francs a quintal is necessary if wheat-growing is to be worthwhile.

The situation is resulting in conferences, demonstrations by small farmers against speculators, and a flood of proposals to Jean Hennessy, minister of agriculture. Senator Boret, former minister of agriculture, in a letter to Hennessy, suggests that the government should act by decree if the situation proves so urgent that action cannot be delayed until parliament re-opens in October.

Entertained By Royalty

Premier MacDonald and Daughter, Ishbel Guests At Sandringham Castle

Sandringham, Eng.—King George and Ramsay MacDonald sat together in the drawing-room of Sandringham Castle tonight and talked about whatever it is that a monarch and premier discuss when the latter is on the eve of a historic journey to the United States.

The Prince of Wales looked in for a short time before leaving the castle. The premier and his daughter Ishbel were house guests tonight of Their Majesties and will probably motor back to London tomorrow.

Mr. MacDonald also had a long interview with the King this afternoon while Miss Ishbel was talking with Queen Mary.

Advocates Crop Insurance

Solution Of Problem For Bad Years Says Eliason

Saskatoon. — Crop insurance is needed as a permanent solution of the consequences of such a year as 1929 said Frank Eliason, secretary of the United Farmers of Canada (Saskatchewan section), commenting on relief legislation passed at the special session of the Saskatchewan legislature recently.

He thought it quite practicable to devise such a scheme of insurance as would prevent hardship in cases of crop failure. The whole community should contribute to such a scheme says Mr. Eliason.

Noted Admiarl Dead

Stockbridge, Hampshire, Eng. — Admiral Sir Hedworth Meux, noted British naval officer, died at Danesbury near here, at the age of 73. Sir Hedworth entered the navay 1870, commanded a naval brigade during the seige of Ladysmith, in the South African War, and was commander-in-chief at Portsmouth 1912-16. He retired in 1921.

Had Served His Time

Friederichshafen. — Alfred Buschko, the German youth who stowed away on the Graf Zeppelin on its last flight to the U.S., was sentenced to three weeks' imprisonment for "disturbing the peace." Buschko was released, however, because he had served the time pending his hearing.

Britain Signs Optional Clause

Geneva.—Great Britain's signature has been officially affixed to the optional clause of The Hague permanent court of international justice by Rt. Hon. Arthur Henderson, foreign secretary. Delegates of India, South Africa, and New Zealand also signed the clause which recognies the compulsory jurisdiction of the court.

Leads Opera In Germany

Berlin.—Albert Coates, noted conductor, led Boris Godounov, at the State Opera, as the first Englishman to wield the baton at the Berlin Opera since Sullivan conducted the Mikado many years ago. Mr. Coates was warmly received by the German audience.

More than 1,000 American citizens are living in South Africa.

Arabia has only one automobile to every 75,000 people.

For Compulsory Pool

Aaron Sapiro In Favor Of Marketing System Without Limitation

Estevan, Sask.—"I am for co-operative marketing without reservation and without limitation, but above all I am for control of the commodity that the farmers raise by the farmers who raise it, and I am for the absolute elimination of even part of that control by those who have a financial interest in breaking down your great pools. I am for co-operation as a means to an end, that your own wheat by the farmers who end being the absolute control of raise it in whatever technical method they think is the best method of control."

Before 700 farmers of the districts tributary to the town of Estevan, Aaron Sapiro, America's most famous co-operative farming advocate, gave expression to these sentiments when, under the auspices of the local lodge of the Saskatchewan section of the United Farmers of Canada, he opened the first gun in the campaign now being started in favor of a sentiment of one hundred per cent. pool by legislation.

Without equivocation of any kind, Mr. Sapiro announced himself as being wholly in favor of one hundred per cent. pool by way of legislation, and in the course of an hour's address gave reasons why such legislation should be sought, why the farmers of the province should market all their grain through a single control, and why those who are now outside the pool should be compelled by way of legislation to place their products through the single marketing organization.

Four questions were outlined by Mr. Sapiro as the basis of his address: first, do the farmers generally understand what is meant by the term "one hundred per cent. pool;" second, why was he brought to the province to advocate the method; third, what objections are raised to it; fourth, why are the reasons for legislation greater than those against it.

Police Return Young Doukhobors To Home

Children Made Escape From Institution At Vancouver

Vancouver. — Eight Doukhobor children, seven girls and a boy ranging in age from eight to 16 years, escaped from the children's aid home here, and set out to join their parents at Oakalla jail. In response to an alarm from the matron of the institution police located the youngsters and returned them to the home.

The children were brought here at the same time that more than 100 members of the Sons of Freedom, a sect of Doukhobors, were brought to jail here to serve six months sentences for taking part in a nude parade at South Slocan, B.C.

Body Of Ranger Found

Employee Of Manitoba Forestry Department Was Missing For a Month

The Pas, Man. — The body of Matthew Nackaway, fire ranger, who was lost in the Norway House district during the forest fire in that section a month ago, has been found.

Nackaway, employed by the forestry department, became separated from the main fire-fighting crew early in August, and despite an intensive search his body was only recently located. Details of the man's death are lacking, but it is believed he had been dead more than two weeks, and that death was due to starvation and exposure.

To Confer With Hon. Forke

Ottawa.—Hon. George Hoadley, Minister of Agriculture from Alberta, is in the capital for a conference with Hon. Robert Forke, Dominion Minister of Immigration. While the subject up for discussion was not officially made known, it is understood certain phases of the employment situation in Alberta are to be discussed.

Will Represent Japan

Tokio.—Japan's first step in the new movement for naval disarmament was announced recently, when the navy ministry ordered Commander Tamon Yamaguchi, of the naval general staff, to proceed to Washington, to join the Japanese embassy staff there, preparatory to the proposed conference for naval limitation.

Income Tax Collections

Ottawa.—Income tax collections are mounting. In the five months ending August 31, collections totalled $60,392,142, an increase of $9,311,918 over the same period in 1928. In August alone, according to the National Revenue Department's figures, collections were $850,427, as against $822,100 in August of last year.

The Shawnee Case

Possibility Of Complications Arising Over Action Of American Coastguard Officials

Washington.—Possibility that firing of a coastguard patrol boat on the Nova Scotia motor ship "Shawnee" off New York, the n'ght of September 11, might develop importance similar to the "I'm Alone" case is regarded here as hinging upon the location of the vessel when fired upon, a point now in controversy.

The "Shawnee's" skipper, Captain John McLeod, of Halifax, claimed he was beyond the 12-mile limit when fired upon and has announced he will protest to the Canadian Government. The government, in turn, it is assumed, will determine if a protest to the United States is warranted. McLeod said his ship was 26 miles off New York when fired upon.

Treasury officials here believe that the "Shawnee" was within the 12-mile limit when coastguard cutter "No. 145" fired at her, on the basis of the report sent here, but will make no official statement on this point until a further investigation.

Coastguard officials said a search of the files indicated the "Shawnee" was a rum runner, operating off the North Atlantic coast from St. Pierre and Miquelon. The "I'm Alone," which was sunk in the Gulf of Mexico, likewise was a rum runner, but the Canadian Government made a vigorous protest which resulted in arbitration proceedings.

Damage To Chinese Property Enormous

Government Estimates Cost Of Russian Raids At $25,000,000

Shanghai.—The Chinese Nationalist Government estimated damage to Chinese property from Russian raids of Manchurian border points at $25,000,000, according to a Kuomin semi-official agency despatch.

For three months the 2,000-mile Russo-Chinese border between Manchuria and Siberia has been the scene of sporadic fighting, the trouble starting over Chinese seizure of the Chinese Eastern Railway administration from the authority of the U.S.S.R.

THOMAS PLEASED WITH HIS RECENT VISIT TO CANADA

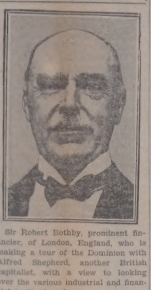

Liverpool, Eng.—"I am completely satisfied with the results of my visit," declared Right Hon. J. H. Thomas, Lord Privy Seal and Minister of Employment, on his return from a visit to Canada. "I hope and I feel that it will contribute towards a solution of the unemployment problem of this country this winter.

"I promise to meet representatives of all business interests which can do business with Canada, so the necessary steps can be taken to give practical effect to my efforts. Canada will take coal and steel from Great Britain which she at present takes from other areas."

"I have not asked Canada to take from us things she produces herself, but I did ask something on account of Britain being the largest buyers of wheat from the Dominion," Mr. Thomas went on. "Canada," he declared, "admitted the force of what he put forward.

"Although, as I say, I shall meet the business organiations of the old country, I say once again, as I did when I took office—there can be no infallible unemployment remedy produced artificially. What we want for that are customers, and these I have done my best to secure," Mr. Thomas added.

PROMINENT FINANCIER

Sir Robert Bothby, prominent financier, of London, England, who is making a tour of the Dominion with Alfred Shepherd, another British capitalist, with a view to looking over the various industrial and financial institutions here.

Guiding 'Planes By Remote Radio Control

Aero Club Given Glimpse Into Future Of Air Transportation

Philadelphia.—Aeroplane speed of 416 miles an hour and 'planes navigated without a pilot aboard through the medium of remote control by radio were glimpses into the future given to members of the Aero Club of Pennsylvania, and the Rotary Club, by speakers at a joint meeting here. It was G. E. Toews, chief engineer of the Aeronautical Laboratories at the navy yard, who in a technical address discussed speed possibilities. A speed of 416 miles an hour is the maximum which can be delivered by any known present day machine, he said, "although Britain may have an engine up her sleeve" larger than any yet constructed.

Edward P. Howard, chief of the air regulations division of the United States Department of Commerce, disclosed that an application has recently been made for the licensing of a pilotless machine to be navigated by radio impulses.

Marler Presents Credentials

New Canadian Minister To Japan Received By Emperor

Tokio.—Hon. H. M. Marler, new Canadian minister to Japan, presented his credentials to the Emperor Hirohito. Mr. Marler rode in an automobile of the Imperial household from his hotel to the palace. The ceremony was brief. The foreign minister and minister of the household were present. Japanese Minister Tokugawa also was given farewell audience by the Emperor, prior to his sailing for Canada on the "Empress of France."

Mongolians Mobilize

Tokyo.—Japanese press agency reports state that the outer Mongolian Government is said to have mobilized all men between the ages of 20 and 40, and has ordered two cavalry divisions commanded by Soviet officers to move to the frontier. The report adds that preparations have been made to move 50,000 troops in accordance with developments in the Russo-Chinese situation in Manchuria.

Earthquake Recorded

Saskatoon, Sask. — The seismograph at the University of Saskatchewan, here, recorded a severe earthquake shock Sept. 17th. It was the most severe registered here in many months. The location of the earthquake could not be determined until compared with records from other points.

Young Aristocrats Sail

Standing on each side of Captain J. N. Griffiths, skipper of Canadian Pacific steamship "Montclare, the Hon. John and the Hon. George Rodney, aged 9 and 10 respectively, had just made the 2,000-mile trip from their father's ranch at Fort Saskatchewan, Alberta, unaccompanied across Canada under the care of Canadian Pacific Railway officials. They are on their way to school in England. The elder is eventually destined for Eton, and the younger will enter the navy via training ship at Dartmouth. Their father is the descendant of the famous British Admiral who won the great sea fight at Cape St. Vincent in 1780.

British Premier May Call Power Conference

Report Says Invitations Likely To Be Issued Shortly

Washington.—Invitations to the five-power naval conference proposed to be held late in January will be issued by Premier Ramsay MacDonald in the near future, but the exact time remains to be determined.

This was learned here authoritatively recently, and with it came the further information that there would be no joint invitations on behalf of Great Britain and the United States as has been suggested in some quarters. Secretary of State Henry L. Stimson, said published despatches emanating from London, that Premier Ramsay MacDonald already had sent invitations through the British embassies at Tokio, Paris and Rome, were without authorization and entirely inaccurate.

The invitations from the British government will go to the United States, Japan, France and Italy, with all five expected to participate in the conference which it is now proposed shall be held in the British capital.

Considerable preparatory work must be done before the invitations are sent forward through the British embassies. It may be that action would be deferred until after Premier MacDonald has held his conferences with President Hoover, in Washington, early in October, on points still in controversy between the United States and Great Britain on the cruiser question.

France Is Suspicious

Critical Of Anglo-American Agreement On Naval Limitations

Paris.—French political opinion continued suspicious of the motives actuating the United States and Great Britain in their agreement on naval limitation.

Several French newspapers remarked that while France and other powers appreciate the peace guarantee afforded by the Anglo-Saxon entente, they would prefer that peace be otherwise guaranteed.

The British proposal to empower the five-nation naval conference to make hard and fast rules and set figures governing disarmament was generally protested here. The press pointed out that the naval conference can only make tentative findings, and that it is the business of the League of Nations disarmament commission to make ultimate decisions and draw up schedules.

If this prerogative of the commission were denied, the semi-official Temps declared, the League would become emasculated.

French experts, moreover, object to considering the problem of naval disarmament apart from related questions, including aerial disarmament. Unless all are considered together, talk of disarming must remain ineffective, in their view.

Making Trip To West

Premier King To Make Short Visit In October

Ottawa.—Premier Mackenzie King proposes to make a trip, probably to the Pacific Coast, starting about the end of October. It will be a somewhat hurried trip, the prime minister said, but he will make a number of speeches, some of them, in all probability, on the way out to the west. Definite arrangements for the trip have been somewhat held up owing to lack of information as to just when Premier Ramsay MacDonald was coming to Ottawa. It has now been settled that Mr. MacDonald will be in the capital shortly after the fifteenth of October, and Mr. King's trip will begin after the departure of the British prime minister.

FOR CONTROL AND LIMITATION OF THE DRUG EVIL

Geneva. — The British delegation at the League of Nations assembly has presented a proposal designed to bring out an international agreement for control and limitation of production of heroin, morphine and cocaine. The move was regarded as representing a complete reversal by the Labor Government of the late Baldwin Government's attitude in refusing to enter an agreement seeking to limit manufacture of narcotics.

The new British position was announced to the assembly's committee on social questions by N. Baker, member of parliament. The British recommendation is that the League Council invite the governments of countries in which narcotics are manufactured to confer together as to the possibility of reaching an agreement on the total amount of each of the various forms to be manufactured annually and as to the quota of each that these countries should manufacture. The new attitude adopted by Great Britain brings her into accord with the attitude of Canada, the United States and Italy.

By the British resolution initiative in calling a conference of the States is placed in the League's Council.

Premier Ferguson Says No Plebiscite On The Liquor Control Act

Toronto.—Launching the first cannonade of his political campaign, Premier G. Howard Ferguson announced before a monster gathering here that there would be no plebiscite under his administration on the Ontario liquor control act.

"There will be no plebiscite so long as the Conservative party is in power," Premier Ferguson exclaimed, "and I happen to be the head of the government. We are quite prepared always to submit our record to the public to have it criticized and discussed, and we must be prepared to accept our responsibility."

He went on: "The government does not say the legislation is perfect. Time and experience are going to demonstrate its weakness." The Ontario liquor control act was admitted to be probably the best in the Dominion. It was administered by a very capable board.

"Let us try and improve any defects in the act as we go aling so that any evils which may exist may be eliminated," Premier Ferguson declared.

"I ar opposed in principle to plebiscites," the premier stated. "They are contrary to the principle of responsible government. A plebiscite is a refuge behind which a government may hide from responsibility."

Premier Ferguson had caustic references for W. E. N. Sinclair, Liberal leader, on the liquor question.

"I see," the Ontario premier declared, "Mr. Sinclair is a bit wobbly in his effort to follow the path of prohibition. I am not quite sure where he is or where he will land in that respect. It appears to me the position he has taken is that the people have approved of the legislation; but Mr. Sinclair does not want the Ferguson Government to administer it. He now says the Ferguson Government should not administer it and to let those administer it who did not believe in it."

H.B. Line Now Ready

But Regular Trains Will Not Be In Operation Until Next Spring

The Pas, Man.—The Hudson Bay Railway is now in shape to allow regular trains to be run to Churchill with safety, it was learned here in official railway quarters.

The final two miles of ballasting of the "First Lift" were completed this week, placing the road in condition for regular traffic.

However, passenger trains will not be run to the Bay until the spring, according to a recent decision in Ottawa. Railway quarters deny the report published in the local press that the muskeg train had completed its first run to Churchill. The train completed its run at Mile 412 as usual. When the train left here recently, it included the private cars of Major J. G. MacLachlan, district engineer, and D. R. Campbell, general superintendent of construction, western region. However, the business cars were taken from Mile 412 to the Bay on a work train. The two officials made an inspection of the Flin Flon and reported everything in order.

Imperial Trade Conference

Movement Under Way To Formulate An Empire Trade Policy

London, Eng. — It is understood that attempts are being made to organize an Imperial commercial conference to be held prior to the meeting of premiers of the British Empire at the Imperial Conference in 1930.

It is proposed that each Dominion shall appoint a small delegation representative of the various interests, agriculture as well as business. The delegation will meet in London three months before the premiers and endeavor to hammer out an Empire trade policy which if agreed upon will be submitted to the premiers as a guide in their deliberations.

Wireless Service Soon

London, Eng.—Beam wireless service direct from England to Australia will be available to the public in the course of a few weeks. This is a new service on which the British post office has been engaged for many months and experimental tests have reached the final stage. Individual messages already have been successfully transmitted in a prolonged series of trials.

Employment On Increase

Ottawa.—Employment in Canada at the beginning of August showed a further marked increase, according to statements tabulated by the Dominion Bureau of Statistics from 6,840 firms whose payrolls aggregated 1,097,812 persons as compared with 1,070,817 persons on July 1st. The record is unusually good for this time of the year and the index number at 127.8 is a record for all time.

Canada Will Sign

Ottawa. — Canada will certainly sign the optional clause in the statutes of the world court of international justice, Premier Mackenzie King says. Mr. King was asked in regard to discussions which are going on at present in Geneva with respect to the signing of the clause by members of the British Empire.

Prince Purchases 'Plane

London, Eng. — The Prince of Wales has bought a two-seated De Haviland Gipsy Moth aeroplane, paying $3,500 for it. It is for his private use, and is equipped with duel control so he can take control himself during flights.

Army and Navy Veterans

Quebec.—The annual convention of the Army and Navy Veterans' Association opened here with more than one hundred delegates from various parts of Canada in attendance. Brig.-Gen. Hon. W. A. Griesbach, of Edmonton, Alta., presided.

Advocates Holding Of Export Canadian Grain For Better Prices

Ottawa. — Nothing should induce the Canadian farmer to move his grain overseas unless he receives a proper price. This is the position taken by E. B. Ramsay, chairman of the Board of Grain Commissioners. "There are sufficient storage facilities in Canada," Mr. Ramsay said in an interview here, "to take care of this year's crop as well as the large hold-over from last year. If there should be any congestion it will likely be only temporary.

"The welfare of all Canada depends on the farmer receiving a proper price for his grain," Mr. Ramsay said. "There has been some reluctance overseas to pay the figure demanded, but this should not discourage the farmer in his desire to obtain an equitable return for his crop."

There was every indication that although this year's crop would not be large, it would be one of the best on record from a grading standpoint. "The bulk of the crop is grading No. 1 and No. 2," Mr. Ramsay continued. "There is so little of the lower grades that the chief inspector has not enough of No. 4, 5 and 6 to make up composite samples for grading purposes."

The chief commissioner emphasized the desirability of regulating the flow of wheat out of Canada. "If all the crop is moved within a few months it necessitates the rushing of a large number of freight cars to western points with higher overhead as a consequence," he pointed out. "If railway companies have to provide for a sudden demand and cars are idle at other times of the year, there is sure to be a higher carriage rate."

Stabilization of grain prices from year to year is essential to the welfare not only of the western farmer, but to Canada as a whole, he declared The western farmer purchases from the eastern manufacturer and stable prices make for financial prosperity. One encouraging sign, Mr. Ramsay said, was that borrowings in the West had been greatly reduced in the last few years, and western banks were more and more able to finance the farmers from their own deposits.

The Hudson Bay route will be as important from the standpoint of imports as from exports, Mr. Ramsay declared later, in an interview. Possibly the new route would have its greatest value in reduced transportation rates on imports for the western farmer. British manufacturers would be in a better position to compete in prices and a pronounced increase in intra-empire trade would result.

"In my opinion," Mr. Ramsay said, "the Hudson Bay route should be regarded as a channel for bringing overseas products to the west. On their return voyages the boats will, of course, carry western grain.

"Not only will the Canadian farmer profit, but people in the Northwestern United States will be able to bring British goods in under bond, escaping the heavier railway charges from Atlantic ports. Canadian transportation facilities would have the benefit of carrying outbound United States products as well. Hard spring wheats from North Dakota, Montana and Idaho are ready to market at the time navigation will be opened through Hudson Strait. Shippers across the border are sure to take advantage of the lighter charges through the northern port."

NATURAL RESOURCES

Seeing that gas has been struck near Oyen last week, and according to latest reports oil dripping from the derrick, if some enterprising individual, or individuals here in Delia would only get together and form a company to drill for gas in this district, business might be enhanced. If successful, things would certainly boom. There is nowhere in Alberta where prospects are better for drilling and striking gas and oil in large quantities than in and around this district. There is the Hand Hills, for instance, with mines producing coal. Where coal is to be had it is conceded there is generally gas. Just think of it! Practically free light, free heat, and putting Delia more prominently on the map. Then the Council might be enabled to put in a modern water supply and sewerage system, not to speak of asphalt streets and granolithic sidewalks, together with a better lighting of the town. There are towns on this North American continent much younger than Delia, where these day-dreams have become true.

REMEMBRANCE

There is instinctive wisdom in our custom of paying tribute to great figures in our national history. We esteem them not alone for what they have done for our own peace, success and happiness but because we focus in them our ideals and aspirations. Their memory builds a shrine for varied offerings, a temple for many forms of faith. We identify them with things spiritual, needful and vital to our own assurance in daily life. Thereby they grow beyond their original stature and become guides, counselors and inspiration of a nation.

Therefore their memory is not in much danger from trifling critics who insist too much on their human weaknesses and errors. Their honor is established not alone in personality and their measure as men like ourselves but is enlarged and illumined by the spiritual fact for which they stand symbol. In paying tribute to their memory we acknowledge the principles and ideals which are the core of our national life and the only garantee of its integrity.

HON. DR. ROBERT G. BRETT

One of the outstanding citizens of the west, and former Lieutenant-Governor of Alberta for two terms passed away Monday night, 16th inst., in the Holy Cross Hospital, Calgary, at the age of 78 years. He was a pioneer in medical work in the province, in which he took a leading part, as well as in public affairs for many years. He lived in Banff during the greater part of his residence in the west.

A man of recognized ability in his chosen profession and one whose services during the long years of his association in civic and professional life were destined to contribute much to the growth of a new country, Dr. R. G. Brett, since the first days of his residence in Alberta, was listed among the most sincere and capable of citizens. Long before, as lieutenant governor of the province, he stepped into the lime-light of public affairs, he was keenly active in politics. He was one of the founders of the Manitoba Medical College and the founder of the hospital at Banff which bears his name, and which has grown to be an institution known all over the continent.

Born at Strathroy, Ontario, on November 16, 1851, he was a son of James and Catherine Brett, and acquired his education at the Strathroy grammar school and Toronto University. He also took post graduate courses in New York and Philadelphia and Europe. From 1874 until 1879 he was engaged in practice in Eastern Canada.

Moving to Banff in 1886, Dr. Brett established the Banff sanitorium and became its medical director. He was among the first to appreciate the natural facilities Banff afforded not only as a sanitorium centre but as a pleasure resort and the location he selected for his sanitorium site was both timely and picturesque

In June, 1878, Dr. Brett married Louise T. Hungerford. There were two sons, Harry and Earl, both of whom predeceased their father. He identified himself with the work of the Masonic Order and was a member of the Anglician church.

CANADA'S TRADE SHOWS INCREASE

Canada's trade in the five months ending August 31 amounted to $1,044,883,786. Despite a reduction of nearly $57,000,000 in wheat exports, the total for five months was $2,400,000 higher than the corresponding period in 1928.

Although imports moved up from $520,355,476 to $561,023,184, domestic exports receded from $522,141,547 to $483,860,602

Wheat exports fell off from $156,594,399 to $99,611,328 and flour shipments were down from $24,429,606 to $21,837,629. Advances occurred in several items, chief of which were newsprint, which was up from $54,980,631 to $59,872,420, and automobiles and parts up from $14,827,333 to $18,110,616.

The five months' period saw exports of foreign origin increased from $8,879,476 to $11,302,429

Trade for the month of August alone, as given at the national revenue department, amounted to $208,005,044. As against August 1, 1928, figures, domestic exports were reduced from $112,493,026 to $96,264,557, and imports from $114,175,346 to $111,740,487. The loss in exports was again due mainly to wheat and flour. The former was down from $30,347,597 to $14,397,493, and the latter from $5,626,107 to $3,822,381. Exports of foreign origin increased in value from $1,411,196 to $2,130,079.

Lines to Calgary

A rose, a breeze, and a gentle rain,
Sparkling drops on the window pane;
Starlit night, with the scent of flowers,
Summer's long sweet drowsy hours!
A child's face shining with love and glee,
Four grey walls, and a friendly tree;
The joys of home the wide world o'er,
And what has life to offer more?

A long, long hill, a darkened town,
Stars in the dark sky shining down.
Winking lights from the windows gleam,
Black flow the river its banks between
Shafts of light on its swift, dark tide;
Houses tall by the waterside.
Oh! sleeping town, whose lights I see,
Life has surely been kind to me.

A little house in a quiet street,
Dark green paint on its fence so neat;
Curtains pink and a pansy bed,
Aeroplanes buzzing overhead.
Four tall trees, and a grassy lawn,
Singing birds to greet the dawn;
A boy and girl, with eyes so true—
Love! my heart's desire and you.

—E. M. B.

INTERESTING PAMPHLET DESCRIBES THE YUKON

Department of the Interior Issues Booklet on Tourist and Other Attractions

At the direction of Hon. Charles Stewart, Minister of the Interior, an illustrated pamphlet of 46 pages has just been issued, entitled "Yukon: The land of the Klondike." Many people still think of Yukon Territory in the terms of the great gold rush of thirty years ago and of the $200,000,000 worth of placer gold which has been dug out of the creeks and hills since that famous stampede one of the greatest in history. Yukon Territory has changed much since then. So far as placer mining is concerned the individual miner with pick and shovel has given place to the incorporating company operating gigantic electric dredges and hydraulic plants, and there has been the development of quartz mining in silver-lead ores. Mining is still the great industry of the Territory but the export of furs from the forests and, lately, from the fur farms is important, and there is the rapidly rising tourist trade. This latter is the chief reason for the issue of this pamphlet. The flow of tourists to Yukon Territory is in two streams: the one drawn by the big-game hunting in the autumn, and the other attracted by the magnificent scenery through the great mountain ranges and down the mighty rivers to the Land of the Midnight Sun. During the season, at least one boat each day, from Vancouver, Victoria and other Pacific Coast ports, lands passengers at Skagway, Alaska, for the railway run over the White Pass to Whitehorse, Y.T., and for the steamer trip down the Yukon river.

The pamphlet describes this route and the various side trips which may be taken. The text and the excellent pictures give a clear idea of the wonders and Beauties of Yukon Territory and of the completeness and comfort of the modern way of travelling over this thrilling and one-time perilous route. Copies may be had free upon application to the Director of the North West Territories and Yukon Branch, Department of the Interior, Ottawa.

New Game Regulations

MUST BE RESIDENTS

Here is an important section of the Game Act, passed at the last session of the Alberta legislature. It provides that notwithstanding anything in the act, no person shall be entitled to obtain a license to hunt, trap, take, shoot, wound or kill any fur bearing animal unless he has been a resident in the province of Alberta for twelve months immediately prior to the date on which any such license is applied for.

Trapping of fur bearing animals by non-residents is therefore prohibited at any and all times. It is illegal for any person other than a farmer on his fenced land, to set or use snares for the capture of any wild animals other than rabbits.

Notwithstanding any other provision in the act, the Lieutenant-Governor-in-Council may from time to time specify the number of game birds which may be taken or killed at any one time or during any period other than periods fixed by the Game Act. The waters of any lake or river now constitute a fence, in defining enclosed land.

MAY CANCEL LICENSE

Whenever any licensee is convicted of an offence against any of the provisions of the act, the convicting justice may direct that the said license shall be cancelled and thereupon it shall be delivered to the convicting justice to be forwarded to the department, and no other license shall be issued to such licensee during the current year.

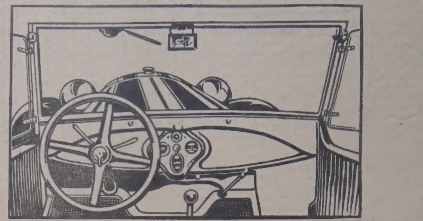

Permits to hunt deer, moose and carabou in the forest reserves of the mountains during September and October can be obtained by residents on payment of a fee of $5, in addition to the regular big game license. Sunday shooting is absolutely prohibited by the Game Act at all times

Some of the unlawful things that hunters are warned against include the following:—To hunt or trap over enclosed lands without having obtained the consent of the owner or occupant of such lands; to kill big game animals under one year of age, or with horns less than four inches in length; to place geese, ducks, snipe, plover, et cetera, in cold storage between March 1 and September 20 following; to hunt or trap fur bearing animals without a license (farmers and members of their families, while actually residing on their farms being exempt); to hunt big game unless clothed in a complete outer suit and cap of white material.

LICENSE FEES

Bird game licenses are issued to residents of Alberta on payment of a fee of $2.25, while that for each big game license for residents is $1. Residents of other provinces are required to pay a license of $50 for the right to hunt big game and game birds, or $5 for a license to hunt game birds only in Alberta.

THE FORD CAR SHATTERPROOF GLASS WINDSHIELD

Protection with Clear Vision

THE shatterproof glass windshield on all Ford cars is one of many important safety features that contribute to the pleasure and comfort of all Ford Model "A" owners. The peace of mind and feeling of security made possible by this factor of safety is further enhanced by the clear vision roof pillars, six-brake system, ¾ irreversible steering, one piece gas tank and all-steel body.

The Ford car shatterproof glass windshield does not splinter under the impetus of a direct blow. In case of a collision there is no flying glass to endanger driver or passengers.

The vision is clear and unobstructed with the Ford shatterproof glass windshield. At the same time the driver realizes that this windshield is a protection and a factor in creating driving confidence and owner enthusiasm.

Drive it Yourself— there is no Better Test

Ford Car Features

Choice of colours
55 to 65 miles an hour
40-horse power engine
Full balloon tires
Fully enclosed six-brake system
4 Houdaille hydraulic shock absorbers
20 to 30 miles per gallon of gasoline
Shatterproof glass windshield
Theft proof ignition lock
Reliability and low upkeep

WIT AND HUMOUR

Jack: "Can you beat it? My sister is only twenty and she's got a bald head." Enid: "Heavens! has he money?"

• • •

Stern Employer: "You want me to raise your salary, eh? Give me at least two good reasons." Meek Clerk: "Twins!"

• • •

Distracted Wife (at bedside of sick husband): "Is there no hope, doctor?" Doctor: "I don't know. What were you hoping for?"

• • •

White: "At last my wife has found some congenial ladies in a bridge club." Black: "How long have they been playing together?" "They begin tomorrow."

• • •

First Prisoner: "What are you here for?" Second Prisoner: "Fast riding. What are you here for?" "Slow riding." "How's that?" "I ran off with a bicycle."

• • •

Boss: "Where is Brown?" Clerk: "Speaking on the telephone to his wife." "How do you know it's his wife?" "Well, he's been on the telephone half an hour, and I've only heard him say 'Hello' so far."

• • •

The millionaire was boasting to his friend about his success in life. "All my success, he said, "all my tremendous financial prestige, I owe to one thing—pluck." "Yes," said one of the party, "but how do you find the right people to pluck?"

• • •

To the applicant for the job of porter at the city office the usual question was put regarding his last place. He replied: "A bank sir." "And did you clean the place out?" "No, sir. It was the head cashier who did that, and they gave him seven years?"

• • •

An Englishman and a Scotsman were arguing about evolution and the Darwinian theory. "So you really think," said the Englishman, "that you and I and our countrymen actually have descended from apes?" "Not exactly," said the Scotsman. "The English descended, The Scots ascended."

Mrs. Crossley (at the meeting): "Now, just take some advice from me, because I know. Show your husbands that woman is the coming man. Woman has always been before, but she's going to be first at last. Woman is the backbone of the country, and it's time the backbone came to the front."

• • •

Two boys halted before a brass plate fixed on the front of a house. On it was inscribed in bold letters the word, "Chiropodist. "Chirrupodist!" remarked one of them. "What's that?" "Why," replied his companion, "a chirrupodist is a chap who teaches canaries to whistle."

• • •

Miss Smarte: "I maintain that woman can do anything men can." Mr. Kewt: "Oh, no, the auctioneer's business is one that a woman cannot go into." "Nonsense! A woman would make every bit as a good an auctioneer as a man." "Just imagine an unmarried lady getting up before a great crowd and exclaiming: 'Now gentleman, all I want is an offer.' "

• • •

"How silly some of these sayings are!" remarked the sagacious man. "Take, for example, that one about there being nothing new under the sun." "Is there anything really new?" asked his wife. "Of course there is! Don't you read the papers? Don't these X-rays enable you to take a man and see right through him?" "Yes, John, dear," she answered gently, "but any woman could do that before X-rays were even thought of!"

• • •

The old countrywoman wended her way slowly along the departure platform of the station in the direction of a solitary seat. Reaching her objective, she sat down with a sigh of relief. Then she noticed a nurse who occupied the same seat. "Ah," she said, eyeing the uniform, "I don't know what we'd do without the like o' you." "Oh," replied the nurse, "you are too kind. There's no doubt you do things equally worthy." "Not me, miss, responded the old lady. "I can kill a duck or a chicken wi' the best—that I admit; but when it comes to 'uman beings, my 'eart fails me!"

Canadian Nurse Honoured

An important Red Cross honour has come to Canada in the award of the Florence Nightingale Medal to Miss Anne Hartley, R.R.C., Matron-in-Chief of the Hospitals of the Department of Pensions and National Health. This medal is awarded biennially by the International Committee of the Red Cross to a few nurses in different countries who have rendered conspicuous service in time of war or public calamity. Miss Hartley is a graduate of the Toronto General Hospital and served overseas in France, Salonika and England from 1915 to 1919. She received the Royal Red Cross in 1916 and a bar to this decoration in 1919. Since the war she has been Matron of various Government hospitals for returned soldiers, and in January, 1929, was appointed Matron-in-Chief for the hospitals of the Department of Pensions and National Health

There seems to be an opinion on the part of many who invested in recent get rich-quick schemes that they didn't make it.

Grant Hall in the West

Grant Hall, senior vice-president of the Canadian Pacific Railway, has been taking his annual tour of inspection in Western Canada and is here shown in the grounds of the Empress Hotel, Victoria, with three old friends. They had just returned from a game of golf and the foursome from left to right is: J. E. McMullen, Canadian Pacific solicitor; Mr. Hall; Chief Justice J. A. MacDonald, and E. H. Macklin, president of the Manitoba Free Press, Winnipeg.

Migration of British Juveniles For Farms in Canada is One of Promising Features of Immigration

The migration of British juveniles for farms in Canada, is one of the most promising features of the immigration situation at the present time," stated R. M. Pym, superintendent in Britain of juvenile immigration for the Colonization Department of the Canadian National Railways, who arrived in Montreal on the White Star liner, "Laurentic," for the annual conference of National Railway Colonization department officials.

Mr. Pym arrived with the final party of British juveniles for the season, numbering some 83 boys, and commenting on the amazing development of juvenile immigration from the British Isles, Mr. Pym stated that altogether this season a total of 1,180 boys had been brought out under the auspices of the Canadian National Railways. This was an increase of 134 per cent. over the season of 1928, and when it was considered that 1928 season showed an increase of 84 per cent. over 1927, it could be realized to what a great extent juvenile immigration had become a factor in the general situation.

More than 1,000 of the boys coming forward this year, were placed by the British Immigration and Colonization Association, of Montreal, on farms throughout Ontario. The balance have been placed by other organizations in both eastern and western Canada. "About 97 per cent. of these boys have definitely made good," said Mr. Pym. "Something like one half per cent. have had to be deported, while the remaining small percentage might be said to be still on the fence, with respect to their desire to stay in this country."

Generally speaking, the boys come from good middleclass families and many of them are fairly well educated, bright and enterprising and eager to make a career for themseves in the new country.

"One of our greatest difficulties, in juvenile immigration work," said Mr. Pym, "has been the prevalence of the old idea, still persisting in the Old Country, that boys and young men were sent to colonies only as a last resort, if they were wayward or criminally inclined. It is surprising to what extent that idea still persists, and it is only gradually that we are replacing this with the true idea that Canada is a wonderful land of opportunity, and that British boys and Britishers in general are welcome here and that in this country they may build for themselves a future not possible in the old world."

"The juveniles movement has become very popular and the prospects for next season are exceedingly promising," stated Mr. Pym.

Sheep and Lamb Fair

Manitoba Sheep Breeders To Hold Annual Show At Brandon

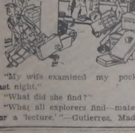

Preparing the way for a sheep and lamb fair this autumn that will be even larger than a year ago, the directors of the Manitoba Sheep Breeders' Association have fixed October 30 and 31 for the annual show. As usual, the fair is to be held in the Winter Fair Arena, at Brandon, and on a scale that will attract wide attention. A year ago there were 600 lambs entered in the show which is fast reaching record proportions, and the directors anticipate a larger entry this year because of more favorable conditions. The recent movement in the province to place sheep on Manitoba farms is expected to lend considerable interest to the Brandon show.

Scrapping Old Ideas

New factory methods, new selling methods, new ideas, new machinery —these are vital requisites for the post-war era. In a new trade you get them more easily than in an old one. That is why cotton pines and artificial silk flourishes. It is not by lockouts that Lancashire can hope to be saved, but by clean-outs—of old ideas, old methods, old machinery, old salesmanship, and above all, dead capital. The North can flourish again —on right lines. — London Daily Chronicle.

It is stated that women barbers are driving many men out of the business. He clips, she clips, eclipse.

In a few years malaria has reduced the population of the town of Birnagar from 80,000 to 2,300.

"My wife examined my pockets last night."

"What did she find?"

"What all explorers find—material for a 'lecture.'"—Gutierrez, Madrid.

W. N. U. 1804

No. 1 Hard Wheat

McTaggart District, In Southern Saskatchewan, Produces Two Carloads Of Coveted Grade

The McTaggart District, of Southern Saskatchewan, situated ten miles northwest of Weyburn, which has for the last 35 years enjoyed a widespread reputation of being one of the finest and most productive hard spring wheat raising districts on the continent, has stepped into the limelight of the agricultural world again this fall by marketing two carloads of No. 1 hard wheat.

The wheat was recently shipped through the Wheat Pool elevator at McTaggart, by William Sinclair and Harry Phillips, a car apiece, and government inspected and graded at Winnipeg.

As far as can be ascertained the last carload of No. 1 hard wheat to be shipped from McTaggart district was about 20 years ago when A. D. Ward secured the coveted grade for a carload of wheat grown on his farm in the district.

The production of the highest grade of wheat in the world in the McTaggart district in this year of drouth constitutes another notable boost for that famed grain raising section of Saskatchewan.

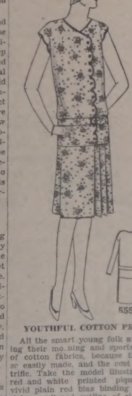

Arabians Prefer a Horse

Country Has Only One Car To Every 75,000 Persons

There is one automobile to every 61 persons in the world, according to figures compiled by the automotive division of the United States Department of Commerce. This proportion is far from evenly distributed geographically, however. The high world average, indeed, is due to the remarkable ratio in the United States, where there is one car to every 4.37 persons.

At the other end of the scale we find the state of Asir, in Arabia, where there is one car to every 75,000 persons. The Arab quite naturally prefers to stick to his horse. Other countries where the automobile still is a rarity include Afghanistan, where there is one car to every 23,166 persons, and Ethiopia, where there is one to 22,545. Obviously there still are corners of the world which have no traffic problems.

YOUTHFUL COTTON PRINT

All the smart young folk are making their morning and sports frocks of cotton fabrics, because they are so easily made, and the cost a mere trifle. Take the model illustrated in red and white printed pique with vivid plain red bias binding emphasizing scalloped outline of side closing bodice, and edge of kimono sleeves. Why it is made in less than two hours! Only a few seams to join! Style No. 555 comes in sizes 14, 16, 18 and 20 years. Made in plain white pique for tennis, it will appear quite different. Peach shantung, gingham check in orchid and white, yellow sportsweight linen, orange silk crepe, capucine tones in printed lawn, voile in pin check in green and white, and white angora wool jersey are stunning ideas. Pattern price 25 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Illustration Stations Supply Grain Seed

Becoming Very Valuable As Destributors Of Better Quality Of Seed

Marquis holds a leading position in the varieties of wheat grown in the provinces of Manitoba, Saskatchewan, and Alberta. According to the chief supervisor of the Federal Illustration Stations, more than seventy-five per cent. of the sales of seed wheat made by the illustration stations last year were of the Marquis variety. In his report for last year, published by the Department of Agriculture, at Ottawa, Garnet was most in demand in the northerly districts of all three provinces. Of the oat varieties Banner and Victory in all the provinces found preference excepting in Northern Ontario, Northern Quebec, and sections of the Maritime Provinces subject to early frost, where the Alaska variety has proved a very desirable oat. Of the barley varieties O.A.C. No. 21, Trebi, and Charlottetown, No. 80, have done well on the illustration stations. The choice of the variety, however, depends largely on the soil and climatic conditions of the district, Trebi having done particularly well on the Manitoba stations. From the crops of the past year grown on illustration stations, 40,072 bushels of seed grain, 7,999 bushels of seed potatoes, and 18,061 pounds of grass and clover seed were sold. The illustration stations, using as they do, only the choicest varieties of farm crops, are becoming very valuable distributors of the better varieties of grain, potatoes, and grass seeds.

Produces Poor Bacon

Soy Beans Not Considered Good Feed For Hogs

Soy beans fed to hogs produce bacon that is quite at variance with the high class, firm product necessary to maintain Canada's place on international markets. Many experiments have been carried out to test the feeding effects of soy beans and, in some cases, to find a means —so far with little success—of reducing the softening effects of that feed.

One of the most thorough of the series of the experiments has been conducted for the last four years under the direction of Professor Sleeter Bull, at the University of Illinois. The illustration and the summary of his conclusions about soy beans for hogs are taken from his reports.

The only test that gave a reasonably good quality of pork was in lot 3.

In this experiment soy bean oil meal was used. This is a by product of the experiment soy bean oil meat was used. This is a by-product of the mills that produce soy bean oil. It is the ground cake after the oil has been pressed out of it. Even this product did not give results equal to the ration where soy beans were not used in any form.

Of course, soy bean oil meal would not enter into the ordinary farm practice of the use of the beans. Ordinarily the beans would find their way into the hog feeds either as pasture, whole beans or ground along with other grains. It is this probability that constitutes the danger in soy bean production.

He Did Not Wait

A railway bridige had been destroyed by fire, and it was necessary to replace it. The bridge engineer and his staff were ordered in haste to the place. Two days later came the superintendent of the division.

Alighting from his private car, he encountered an old master bridge builder.

"Bill," said the superintendent anxiously, "I want this job rushed. Every hour's delay costs the company money. Have you got the engineer's plan for the new bridge?"

"I don't know," said the bridge builder, "whether the engineer has the picture drawed yet or not, but the bridge is up and the trains are passin' over it."

The Crown Colony of Hong Kong was ceded by China to Great Britain in January, 1841.

Gold produced in the world during 1927 amounted to 15,000,000 pounds sterling.

Science In the Dairy

Milk Can Be Cooled and Pasteurized In Same Tank

It is now possible for milk to make the entire journey from cow to consumer without contact with the air until opened for use. Grandpa wouldn't have believed it, and if he had, he would have said it was silly. In his days cows were milked in an open bucket, by hand, while flies, dust and millions of bacteria swarmed over the pail. It was grandpa's idea that thunder made milk sour, and as far as as he was concerned, or even interested, the bacterial count per cubic centimeter was a lot of applesauce.

A modern generation thinks differently and barnyard milking has given place to dairy science. Now comes R. R. Graves, who is in charge of dairy cattle feeding, breeding and management of investigations for the bureau of dairy industry, United States Department of Agriculture, with an idea that may set a new pinnacle of dairy sanitation.

Installed on the Beltsville, Md., experimental farm, his method consists of overhead sanitary pipelines that carry milk direct from the cow to the large vacuum tanks in the dairy house. It can be cooled as it enters the tank, or it can be pasteurized and then cooled in the same tank. It is possible, he says, to go a step further and bottle the milk under vacuum, using the principles new commonly, employed in canning fruit and vegetables.

The system consists of a mechanical milking unit of standard make, but instead of going into the usual portable receptacle, the milk is drawn into a stationary container located between two stalls and somewhat above the cows. The receptacle is of unbreakable glass and is suspended from a weighing mechanism. Its transparency makes the rate of milking visible to the operator at all times, both by the amount of milk in the receptacle and by the weight registered by the scale. When the milk ceases to flow into the receptacle, the operator records the weight of the milking and opens a valve which permits the milk to be drawn from the bottom of the container through the pipelines.

Tests of the bacterial content of milk produced under the new system, show that after pasteurization and cooling, the average count for four days was only fifty-five per cubic centimeter. The system not only gives a cleaner product, Graves says, but reduces the labor and the costs incidental to milking.

Flour Exports

Greatest Volume Of Flour From Canada Last Year Went To China

Canada shipped wheat flour directly to 83 countries during the last crop year, ending July 31st, and wheat to 34 countries. A return of the Dominion Bureau of Statistics covering this period showed exports of wheat to all destinations at 354,424,699 bushels, and of wheat flour at 11,808,775 barrels. The greatest volume of flour exported from Canada in the last crop year went to China, with the United Kingdom second, and Germany third. Shipments to China amounted to 3,040,667 barrels; those to the United Kingdom 2,637,867 barrels and to Germany 1,097,289 barrels.

Women Explorers

Three young women, Baroness Christa von Bradenstein, Miss Neda de Namur, and Miss Margaret d'Angelo, recently set out from New York to explore Alaska, the Gobi Desert, and the wilds of Australia. Loaded in the back of their car they had a tent, three army cots, a motion picture camera, an ordinary camera, a typewriter, a camp stove, and a German shepherd dog.

Mrs. Soap: My husband has left me. He ran away with our maid.

Mrs. Sudds: How terrible! Isn't it? It is so hard to find servants now.

PROMOTED

H. C. P. CRESSWELL

Superintendent, Department of Colonization and Development, Canadian Pacific Railway, Montreal, who has been appointed Assistant European Colonization Manager of the Department with headquarters at London, England.

The Combine Harvester

No Reason Why Combine Cut Grain Should Not Grade As High As Grain Cut By Binder

About 600 cars of average grain crop may be harvested in a season by the modern combine reaper-thresher having a width of cut of 15 or 16 feet. On the same basis a machine cutting a 100 foot swath would handle about 400 acres. These figures have been arrived at in seven year's experience with the combine reaper-thresher at the Swift Current, Saskatchewan, experimental station.

The results of this experience with work done not only on the station, but on many farms throughout the province, are presented in Bulletin No. 118, of the Department of Agriculture, at Ottawa. Most of the combines included in this study threshed the wheat as it was cut, while others were equipped with a windrow harvester and pickup. In using the combine it is shown that caution must be observed in the date of commencing its use and proper recognition must be taken of the effect of even light showers, dews, and white frost on standing grain. When all these precautions are intelligently observed, the officials of the stations, who have been studying the question, feel that there is no good reason why combine cut grain should grade lower than binder harvested grain.

Practically all cases of toughness and dampness arising from the use of the combine are believed to be due either to a too early start, or to harvesting early in the day following a night of dew or white frost.

Influence Of a Newspaper

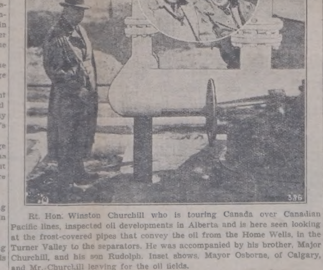

Great Many People Do Not Read Anything Else

The value of newspapers is clearly illustrated by the statement of a Chicago publisher to the effect that 75 per cent. of the people of the United States who read, read nothing but newspapers. There are forty million newspapers sold in the United States every day. If the statement of this Chicago publisher is true then it should impress upon his mind the great responsibility resting on the shoulders of the editors and if this were accomplished there would undoubtedly be a radical change in the character of some of the newspapers published on the other side of the line. There is no doubt that newspapers have a great influence upon the life of this and other nations. Undoubtedly the reading of a great many people is confined to newspapers—and sometimes to only one newspaper. The selecting of reading matter for the masses is therefore an important undertaking and should be done with care and judgment.

Ellsworth (all dressed up in evening clothes)—Edith, wouldn't you like to be a man?

Edith—Yes, wouldn't you?

Winston in the West

Rt. Hon. Winston Churchill who is touring Canada over Canadian Pacific lines, inspected oil developments in Alberta and is here seen looking at the frost-covered pipes that convey the oil from the Home Wells, in the Turner Valley to the separators. He was accompanied by his brother, Major Churchill, and his son Rudolph. Inset shows, Mayor Osborne, of Calgary, and Mr. Churchill leaving for the oil fields.

Various Live Stock Organizations Are Being Called Upon For Increased and Better Production

Every exhibition and various live stock organizations receiving federal government aid are being called upon to boost for increased and better production. Hon. W. R. Motherwell, Minister of Agriculture, sounded that note at the National Exhibition in Toronto, and it will be repeated from one end of Canada to the other.

The Department of Agriculture is convinced that Canadians have mighty appetites, and as a result, they are eating much of the produce that used to go for export. In the face of an increase of 148,000,000 dozen eggs per annum last year, over the total of 1920, Canadians consumed so many that there was scarcely enough left for export to balance the eggs imported during the winter months. Accordingly Canada is now practically off the map as an egg exporting country. Canadians per capita have a considerable lead over any other people in the world in the consumption of eggs.

The situation with regard to butter is practically the same. It is claimed that in proportion to its population, Canada beats the rest of the world in the amount of butter it uses. So in spite of a steady increase in production there is no butter to export. Poultry and lamb are also in the class of products which Canada grows great quantities and now consumes all.

Canada's exports of bacon are falling off at the rate of about 30,000,000 pounds a year. If it keeps up in two years she will be off the export market although the hog population is greater than it was ten years ago.

The Department of Agriculture is accordingly trying to step-up production in the above commodities. It is urged that this is a time of big production in every other line of activity. Farmers and their families want more than they used to expect in the way of luxuries, and the farmer to pay for these must produce on a greater scale than when his wants were less pretentious.

Many reasons are given for the increase in food consumption by the people of this country. It is claimed to be increasing faster than the growth in population. The great influx of United States tourists is given as one reason. Another is the development of outside or semi-outside occupations such as the paper mills and the mining industry, where workmen as a rule eat more than at inside jobs. Then Canadians are a busy people and busy people, Mr. Motherwell said in an interview recently, eat more than loafers.

Value Of Research Work

Once Destructive Agent Now Used As a Fertilizer

The feat of making two blades of grass grow where one grew before has been excelled by researches conducted at the smelter, at Trail, B.C. Hitherto the sulphuric dioxide fumes, highly destructive of vegetation, have made the districts about such works a wilderness. Lawsuits were the only productive crops on the farms roundabout, and the company had to pay large sums in damages to the farmers. Similar trouble was experienced in the neighborhood of the nickel smelters in the Sudbury district.

Chemists were put to work to find a remedy. They have not only done this, but have discovered an unexpected value in the baleful fumes. A process has been evolved whereby what was once a destructive agent can be utilized in the manufacture of a fertilier for which there is said to be an unlimited market on the prairies.

The announcement of the discovery includes a statement that a plant to cost seven or eight million dollars, will be built at Trail for the manufacture of this chemical fertilizer. It will call for large additional electrical development, so that business generally will be stimulated.

The incident illustrates the far-reaching value of chemical research. It vindicates the expenditures which Ontario and the Dominion have undertaken in this direction.—Toronto Telegram.

Women Could End War

Will Play Large Part In Enforcing Peace, Predicts Lady Astor

The prophecy that women will play an important role in forcing observance of the Kellogg pact is made by Lady Astor, member of Parliament, in an article in the October issue of McCall's Magazine.

"Women can do such a lot, if they really try," she writes, "with their own generation, with their children. If they really want world peace — and I believe they do—they can get it. But not by sitting still and leaving politics alone, nor even by voting at election time and doing nothing more. They've got to be up and doing, in the political world, to which now in most countries they are at last admitted.

"It is only by the strictest vigilance on the part of the people that any of our governments can be kept straight; and it is only the people who know what they are looking for who can be really vigilant. And so I feel that the international organizations of women are doing a splendid thing.

"Women know that peace is essential to their home and their children, and all they care for, and I believe their peace-making activties are among the surest hopes of the future."

Portable Hog Cabins

Small, Movable Cabins Will Be Found Of Great Advantage

While a substantial hog pen is necessary on a farm where pigs are raised to any extent, it is of great advantage to make use of small movable cabins, particularly for housing brood sows under winter conditions or under summer conditions when on pasture. The small cabins are also useful as a shelter for growing pigs in summer when on dry lots or pasture. The Dominion Animal Husbandman, in his report for 1928, published by the Department of Agriculture, at Ottawa, recommends a cabin with a floor area of fifty square feet. A cabin of this size will comfortably house five adult brood sows when fed outside and given the run of the yard. Such a structure has been found at the experimental farms to be inexpensive and in many instances may be constructed from material which is found on the farm. The A-shaped cabin popular some years ago, has lost favour at the experimental farms, as the sloping roof is apt to be broken away by the hogs when crowding inside. The walls should be perpendicular for three or four feet with a ridged roof above.

B.C. Mineral Output

The mineral output in British Columbia for the first six months of the year aggregated $35,256,063, an advance of 7.8 per cent. over the figures for the first half of 1928, according to Hon. W. A. Mackenzie, Minister of Mines.

"When we were first married you were only too glad to wipe the dishes."

"I know, but that was when we only had two dishes."

Seals found along the coast of Labrador are hunted, not for their fur, but for leather and fat.

Chronic borrowers are more or less touchy.

There are 7,000 miles of watermains in London.

Importation Prohibited

Ban Is Placed On Cattle From Scotland, Owing To Outbreak Of Foot and Mouth Disease

A ministerial order signed by J. H. Grisdale, Federal Deputy Minister of Agriculture, cancels all permits for the importation of cattle, sheep, goats and other ruminants and swine from Scotland to Canada. The only exceptions to this order are those already embarked on vessels en route to the Dominion. The order is under the provisions of the Contagious Diseases Act, and is made on account of an outbreak in Lanarkshire, Scotland, of foot and mouth disease. Similar restrictions are in effect regarding shipments of these animals from England.

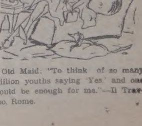

Barclays Bank

Barclays Bank, of London, England, one of the oldest and strongest of British banks, has established itself in Canada under the name of Barclays Bank, Canada. Its first place of business was opened in Montreal, on September 3. It will transact a general Canadian banking business in affiliation with its business in the British Isles, and in several countries of the British Empire. The president of Barclays Bank, Canada, is Rt. Hon. Sir Robert L. Borden, Former Prime Minister of Canada.

Winnipeg Grain Exchange

Membership in the Winnipeg Grain Exchange has been raised to $50,000. A resolution that the cost of membership be raised to this figure was carried unanimously at a meeting of the Grain Exchange on August 27th. The last membership was sold for $28,700.

In Australia there are at least 20 species of animals that are aviators —flying squirrels, flying possums, flying mice and even flying bears.

WORLD HAPPENINGS BRIEFLY TOLD

New Zealand will appoint a trade representative in Canada, it has been announced. Growing commerce between the two countries is given as the reason.

The monoplane Bremen, first to cross the North Atlantic from east to west, is to be placed on permanent exhibition at the Museum of Peaceful Arts, in New York.

A young peach tree bearing a fruit, half of which was a peach, and the other half a nectarine, was exhibited at the recent show of the Royal Horticultural Society in London, England.

Exports of Canadian wheat during the month of August totalled 10,156,266 bushels with a valuation of $14,397,493, according to returns compiled by the Dominion Bureau of Statistics.

The R-100, British dirigible now under construction at Cardington, England, which was expected to make a trans-Atlantic flight to Montreal this fall, will not do so until next May, according to officials of the Department of National Defence.

Hon. Dr. Robert George Brett, pioneer medical practitioner in Alberta and one of the most outstanding public men in the province, died recently in Calgary, at the age of 78, after an illness extending over several weeks.

Lord Ypres, son of the late Field Marshal, plans to leave for the United States shortly to exhibit his paintings. Lord Ypres paints his pictures in a studio built in the garden of his home, Ivy House, built during the reign of William III.

Premier Mackenzie King proposes to make a trip, probably to the Pacific Coast, starting about the end of October. It will be a somewhat hurried trip, the prime minister said, but he will make a number of speeches, some of them, in all probability, on the way out to the west.

French Bakers Celebrate

Commemorated Four Hundredth Birthday Of the Doughnut

This generation has an evident fondness for anniversaries. People like them, and seek causes for holding them. Therefore, no person can object when French bakers decide to commemorate the 400th birthday of the doughnut.

The first example of the famous comestible was made in Paris in 1529. Some time later it got passage over the Channel into England, and from there made its way with household effects and other ideas to this continent.

The first doughnut, we read in the Christian Science Monitor, was shaped like a crescent. That is, of course, interesting, but is of comparatively little importance. The real thrill will come with the name of the genius who first took a hoe and molded the doughnut round the vacant space.

First Airplane Express

Service Was Started Ten Years Ago By British Enterprise

August 25 saw the conclusion of the first ten years of commercial aviation.

It was on August 25, 1919, that the world's first aeroplane express service was started by British enterprise between London and Paris. The pilot was Captain E. H. Lawford, a famous pioneer airman, and the machine was a D.H.-Rolls-Royce biplane of 300-h.p., carrying only two passengers.

Today one of the London-Paris air liners of Imperial Airways develops more than 1,000-h.p., and carries 20 passengers, besides pilot, engineer, and steward.

At the end of 1919 there were only about 3,000 miles of organized air lines throughout Europe. Today the figure stands at 50,000 miles, while throughout the world there are 90,000 miles.

The smallest distance yet measured is the distance between the atoms in a crystal of common salt. It is about one hundred-millionth of an inch.

The man who feels a small job beneath him is invariably too small for a bigger one.

Mystery Of Steel Hardening

Steel Now Produced That Is Harder and More Ductile Than Damascus

Mystery and secrecy that for centuries shed romance over the art of steel hardening in America, has almost entirely disappeared, according to W. H. Eisman, secretary of the American Society for Steel Treating.

The famous blades of Damascus, tempered, says legend, by being run through the body of a slave, hold no secrets for modern swordsmiths. Steel is produced now that is harder than Damascus 'and possibly more ductile.

Dr. W. S. Carnes, a metallurgist, of Canton, Ohio, has produced a sword with which he can shave, and yet so ductile that he can wind it several times around his arm. It is of carbon vanadium steel. As recently as 10 years ago, some of the processes of hardening steel were carried on in gloomy and secluded basements. The officiating smith even wore a high silk hat, muttered abracadabras and made passes over the treating tank.

Potatoes played an important role. Half a spud was set afloat on the water. Where the potato came to rest was the best place to plunge the white-hot steel. During the war, a great stir was made when a group of steel treaters in Poughkeepsie, N.Y., could not obtain water from Sheffield, England. They thought this had given Sheffield steel its quality which steel treaters the world over had tried to imitate.

Today the process of steel hardening has become automatic with colored lights flashing the instant steel assumes the proper hardness.

UNUSUALLY LOVELY

A charming tub silk in gay print in red and white coloring, so important for summer wardrobe. Its practicality and sportive-air carries one through an entire day. It can be worn to town for shopping, or to the office, and then to keep luncheon engagement at any fashionable restaurant. It is suitable for Country Club, for the beach or week-end party. Style No. 563 with its gracious flaring skirt with soft gathered fulness creating a cascading draped effect at side, and slightly bloused surplice closing bodice, is most fascinating, made of flowered chiffon for afternoons. It may be made with the long sleeves or with the sleeves omitted. It is designed in sizes 16, 18 and 20 years, 36, 38, 40 and 42 inches bust. Printed cotton voile, printed lawn, sheer pastel linen, printed rajah and georgette crepe, other attractive fabrics. Pattern price 25 cents in stamps or coin (coin is preferred). Wrap coin carefully.

The Worm Turned

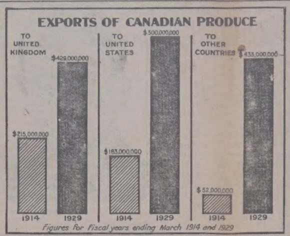

The lift in the big store was crowded with shoppers. A homely-looking woman, laden with parcels, accidentally trod upon the toe of a smartly - dressed creature whose shoes were certainly not made for comfort.

"How clumsy you are!" screamed the injured one. "You might have broken my instep."

The offender apologized, but that only seemed to make matters worse, and the strident voice was heard again—"Do you think my feet were made for an idiot to walk on?"

The other woman had had enough —"It almost seems as if they were!" she rejoined quietly.

THE GROWTH OF CANADA'S EXPORTS

Nowhere is the advance in the development of Canada's resources more vividly reflected than in the records of the Dominion's export trade. The sheer increase in the value of that trade is amazing enough in itself, but no less astonishing is the manner in which Canada's exports have spread out into new channels.

The United Kingdom and the United States have long been Canada's two great customers, and until recent years other countries have taken only a minor share of the Dominion's exports. Within the past fifteen years a remarkable change has occurred. During that period the Dominion's sales to the United Kingdom have doubled in value, those to the United States have trebled, and at the same time exports to "Other Countries" have risen more than seven-fold. These "Other Countries," formerly a minor factor, now afford a huge market outlet for Canadian products. They bought from the Dominion last year a bill of goods greater in value than the whole export trade of Canada fifteen years ago.

To these widely scattered and lesser-known markets Canada's resources furnish an immense variety of products in natural and manufactured forms. Silver and artificial silk to India, newsprint and sardines to Australia, potatoes to Cuba, lead and lumber to Japan, herring to China, foxes and lobsters to Sweden, oats and nickel to the Netherlands, salmon and furs to France, cheese and furniture to South Africa, rye to Norway, zinc and asbestos to Germany, codfish and copper wire to Brazil, aluminium and woodpulp to Italy, and, of course, wheat and flour to all quarters of the globe—these and a thousand and one other items help to extend the web of Canadian commerce across the seven seas.

Clue To Unsolved Mystery

McMillan Expedition Finds Traces Of Frobisher Party, Lost In 1576

A clue to an unsolved mystery of nearly 400 years' standing—the fate of five men left on Kadlunarn Island by Sir Martin Frobisher in 1576—is reported by Donald B. MacMillan, on his return here from over two months' exploration voyage to Baffin Land.

On an island on Countess Warwick Sound, the famous explorer discovered an ancient stone house which the Eskimos said was the work of white men. Inside were the bones of a bear and other evidence that it had been used as a shelter. The age of the moss and other particulars pointed to the dwelling being contemporary with Frobisher.

Kadlunarn was also visited and there the party found, in a very fair state of preservation, the house built by Frobisher in Queen Elizabeth's day. Digging in the earth floor, they discovered some pottery and other relics belonging to that period; also traces of the ship-ways down which the intrepid explorers launched the boats they built after their ships were crushed in by ice.

It was hitherto supposed that the five men left behind by Frobisher on one of his three voyages made attempts to build a fort to protect the supposed gold mines and had been killed by Eskimos. Careful enquiry among the natives reveals a tradition that the white men were not slain, but built a big boat and set out on their perilous return to England.

The relics now found by MacMillan indicate that they had proceeded only about fifty miles when their frail craft was crushed by icebergs, and one or more escaped ashore and built the shelter in Countess Warwick Sound.

Radio Replaces Carrier Pigeon

The radio is giving the carrier pigeon a back seat. Secretary Adams has ordered the abandonment of all pigeon lofts except those at Lakehurst and Guam. This action retires 400 of the 800 birds in the service. The pigeons retained will be used only at stations where lighter than air craft and balloons are employed. Since all navy 'planes are being equipped with radio there is no need for the carriers.

Making matches with yellow phosphorous is now prohibited in China.

Had Diarrhoea

Bowels So Active Feared For His Life

Mrs. S. J. Jago, Canobie, N.B., writes:—"My little boy, when three years old, had a severe attack of diarrhoea. The bowels were so active, and he vomited so much, I feared for his life. I tried many medicines, but he was always getting worse. A friend told me of

and after the second dose I saw an improvement. I gave him almost half a bottle and he was completely relieved.

"I have used it for the other children, and my husband and myself. My husband gives it great praise, and when he goes away from home to work he always takes a bottle with him."

Put up only by The T. Milburn Co., Ltd., Toronto, Ont.

Recipes For This Week

(By Betty Barclay)

CARROT MARMALADE

12 raw carrots.
4 cups sugar.
3 Sunkist lemons.
1 teaspoon ground cloves.
1 teaspoon ground cinnamon.
1 teaspoon ground allspice.

Grate carrots, add sugar and let stand one hour. Add lemon juice and spices. Cook slowly for one hour. Turn into sterilized jars and seal when cold.

SEEDLESS BLACKBERRY JAM

The seeds of blackberries are very objectionable to many, so it is well to get rid of them. Mash berries, cook in their own juice until thoroughly heated then remove seeds by pressing through a fine sieve. Measure pulp and liquid and allow one cup sugar for each pint. Add sugar to pulp and cook rapidly until thick, stirring frequently. Pack in clean, hot jars and seal.

Research Possibilities

By Dr. H. M. Tory, President National Research Council

No one can realize what may be before us. I saw a statement made by a distinguished professor of chemistry that if we could write down the formulae for all combinations possible from a molecule containing one hundred atoms, these formulae alone would fill all the pages of all the books in the world. He was giving that as an illustration of the wide open field that lies before the chemists of this country in developing its chemical industry. Fifty years ago, there was no such thing as a strictly chemical industry. Last year in Canada alone there were invested in chemical and allied industries $750,000,000 which produced $500,000,000 worth of products, while in the United States the corresponding production amounted to approximately $7,000,000,000.

Brains and Intelligence

Size Of Skull Is No Index To Person's Mental Capacity

When a complete skeleton, apparently that of a Roman, was discovered the other day in Surrey, England, Sir Arthur Keith commented on the size of the skull, the capacity of which was 1,770 cubic centimeters. "He had more brain capacity than I have," remarked Sir Arthur. "What I would really like to know is, what did he do with it?" The size of the brain, however, does not index intelligence. This is shown by the case of Erasmus, whose remains were brought to light in the course of recent excavations in the cathedral at Basle, Switezrland. It was estimated that the brain could not have measured more than 1,200 cubic centimeters, whereas the average size of a European's brain is 1,375 cubic centimeters, or nearly 10 per cent.

Served In Riel Rebellion

Captain H. O. Gray, 74, for years a crack rifle shot on teams representing Canada, died in a hospital at Ottawa. He was a member of the Ottawa sharpshooters during the Riel Rebellion in 1885. He was a member of the council of the Dominion of Canada Rifle Association.

Consider the postage stamp. It sticks until it delivers the good.

SUNDAY SCHOOL LESSON

SEPTEMBER 29

SIGNIFICACE OF THE EXILE AND THE RESTORATION

Golden Text: "The lovingkindness of Jehovah is from everlasting to everlasting upon them that fear Him, and His righteousness unto children's children."—Psalm 103.17.

Before the destruction of Jerusalem, the prophet Ezekiel went into exile with the first deportation, and five years afterwards he was called to the prophetic office. It was a severe arraignment of the people of Israel that he was told to make in the name of the Lord. Ezekiel lived up to his responsibility. Do we live up to ours? It is one thing to have convictions, but quite another thing to have the courage of convictions. A responsibility calls for a response. Not to respond to the responsibility that rightfully belongs to us is cowardly and base.

The captivity was God's training school, where the exiles were given an opportunity to lament their rebelliousness and recognize their dependence upon Him. Jeremiah had prophesied that after seventy years were accomplished, God would visit and perform His good word toward them, in causing them to return to their home. The first opportunity for return from exile came in the first year of Cyrus, King of Persia. Jehovah stirred up the spirit of his king to make a proclamation permitting any who wished to go back and build the house of Jehovah.

The chief desire of the returning exiles was to rebuild the temple and re-establish their ancient worship. It was a great day when the foundation of the temple was laid, vocal and instrumental music formed part of the ceremony, and joy reigned supreme. But while there was joy in all hearts, conflicting emotions filled the hearts of the old men who had known the glorious temple of Solomon. They were weeping as well as rejoicing. Life has many such scenes, when the bitter mingles with the sweet. One of Tennyson's odes refers to a wedding as "the white funeral of single life." The foundation laying of that second temple in the midst of ruin and desolation was to the old men a "white funeral" of all the glories of the past.

Juveniles To Compete

Boys' and Girls' Swine Clubs Membership Is Necessary

More than five thousand boys and girls on Canadian farms will be taking part in the annual swine club and calf breeding contests in the various provinces this year, for which the Canadian National Railways offer prizes and trophies, it was stated recently by Dr. W. J. Black, Director of Colonization and Agriculture, of the National System. Through the stimulation of the assistance offered in this work by the railway company, in bringing the boys and girls together in annual competition, the work of the clubs has progressed rapidly, particularly with respect to calf clubs. There will be nearly 200 of these in operation this year, there being a 400 per cent. increase over last year.

World's Costliest Bible

Russian Princess Owns One Encrusted With Costly Stones

The world's costliest Bible is owned by Princess Paley, and came to her with other treasures from the palace of the Czars at Tsarskoye Selo. One of its covers, which measure only five and a half inches by seven and a half, is encrusted with diamonds and emeralds in the form of a floral spray, with an interwining monogram "A" of rubies, and on the other is a cross of fine diamonds. The clasp is of sapphires, and the text in tiny gold leaf print.

James Fenimore Cooper could not write unless he was chewing gum drops, it is said.

Three Year Old Makes Long Journey

Little Boy Travels Alone From Liverpool To The Pas, Man.

Albert Pilkington, aged three years, stepped off the Continental Limited in Winnipeg recently, clutching in one hand a ticket that was taller than Albert by many inches, and in the other "Bosco," a mechanical doll, who had accompanied him all the way from Liverpool. Albert, or Bert, as he insists on being called, was en route to The Pas, where his father sent him to be looked after by an aunt upon the death of his mother. He sailed on the SS. Regina, in charge of the captain of that ship, and at Montreal was turned over to the care of George Cosgrain, Canadian National Railways conductor, who looked after him on the journey from Montreal to Winnipeg.

When the Continental Limited reached Winnipeg, Albert gravely climbed down from the train, shook hands with his friend the conductor, smiled for the photographers, and announced that he wanted an automobile ride. Bert was promptly accommodated, and when he boarded the train for The Pas, on the last leg of his journey, he gave his opinion that "Boats were very nice, and automobiles were even nicer, but, what Bert liked best of all, was "riding on a train." This winter when Albert is in the North he will have the thrill of riding on a dog sled, but until that time the railways have a certain small and enthusiastic booster.

Barcelona Taxes Postage

Barcelona citizens have been subjected to various taxes to help defray the enormous expenses of the International Exposition. All letters posted in Barcelona must, in addition to the regular postage, bear an exposition stamp of five centimos (about three-quarters of an American cent). A tax of 1000 centimos is levied for each long-distance call and each telegram originating there.

Married women in Dallas, Texas, are not permitted to hold positions outside their homes, unless there are "especially mitigating circumstances."

It is estimated that about six or seven persons out of every million are struck by lightning.

The average person consumes his weight in food once a month, which totals about 1603 pounds a year.

Huge Milk Shipment

Largest Consignment Of Its Kind Shipped From Aylmer To Western Canada

Seven hundred and fifty thousand cows working in high gear for one whole day could contribute just enough milk to make up a shipment which left Aylmer, Ont., on a special Canadian National Railways freight recently for the west. Product of an Aylmer Milk Evaporating Company, it was the largest shipment of its kind ever to leave any point in Canada, and made up a train consisting of 200 cars. There were 11,880 cases containing 700,000 cans and weighing 353 tons in the consignment which is destined to grace the tables of farm houses during coming season. It required 1,500,000 pounds of fresh milk to make up this shipment at the largest evaporated milk plant in Canada. The product has a value of $65,000 and is pointed to as a sterling example of an extension of the dairying industry in Canada.

Although a small part of the shipment will reach the Pacific Coast, it is, in the biggest part, for consumption throughout the prairie provinces.

Promoting Trade Welfare

Six Apprentice Grocers From Great Britain Now Touring Canada

So that they may know better the Canadian goods they will hand over the counters in their shops in England, and to promote the welfare of trade between the mother country and the Dominion, six apprentice grocers from Great Britain are now touring Canada, under the auspices of the Department of Trade and Commerce, with the co-operation of the Canadian National Railways. They were selected for the tour by an essay competition conducted by the British Institute of Certified Grocers for the Department of Trade and Commerce.

Natural Gas Exploitation

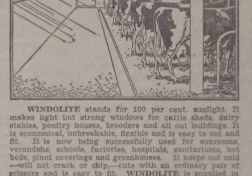

Exploitation of the district along the South Saskatchewan River, in the neighborhood of Riverhurst, with a view to ascertaining the possibilities of natural gas is to be undertaken on a more extensive scale within the next few weeks, it is reported.

During the reign of Queen Elizabeth three convictions for begging entailed death if the man was over eighteen.

WINDOLITE

The Improved Glass Substitute

MADE IN ENGLAND

WINDOLITE stands for 100 per cent. sunlight. It makes light but strong windows for cattle sheds, dairy stables, poultry houses, brooders and all out buildings. It is economical, unbreakable, flexible and is easy to cut and fit. It is now being successfully used for sunrooms, verandahs, schools, factories, hospitals, sanitariums, hot beds, plant coverings and greenhouses. It keeps out cold —will not crack or chip,—cuts with an ordinary pair of scissors and is easy to fit. **WINDOLITE** is supplied in rolls any length but in one width of 36 inches only. A square yard of **WINDOLITE** weighs about 14 ozs., while a square yard of glass of ordinary thickness, weighs about 135 to 190 ozs. The improved **WINDOLITE** requires no varnish. **WINDOLITE** is made in England.

Price $1.50 Per Square Yard, f.o.b., Toronto.

**Use WINDOLITE and let
YOUR PLANTS
YOUR CHICKENS
YOUR CATTLE
Bask in 100 % Sunlight
Send for booklet "WINDOLITE"**

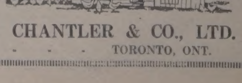

COMES WITH A MESSAGE OF HEALTH

THE sun is the all-powerful life producer, Nature's universal disinfectant and germ destroyer, as well as stimulant and tonic. **WINDOLITE** is the sun's most important ally.

Medical research has definitely proved that from the point of view of Health and Hygiene, the most effective among the sun's rays are the Ultra-Violet rays, which possess the greatest power for the prevention and cure of disease and debility.

Science has further established that ordinary window glass does not allow the passage of Ultra-Violet rays, so that by using glass we are artificially excluding these vital health-giving rays. Therefore, the invention of **WINDOLITE** has completely satisfied the long-felt want. Exhaustive experiments have conclusively proved that it is a most effective substitute for glass, that it freely admits the Ultra-Violet rays, and that its use has a most beneficial effect on the growth and development of plants and chickens and on the well-being of cattle, enabled for the first time to have healthy light instead of darkness in their sheds.

Indeed, the discovery of **WINDOLITE** has during the last six years completely revolutionized gardening, given a new stimulus to poultry breeding, increasing the egg-laying capacity and fertility of chickens, has greatly improved the health of cattle and is now being used in domestic and household requirements.

The Singing Fool

By HUBERT DAIL

Copyright, 1928, Warner Bros. Pictures, Inc.

SYNOPSIS

Al Stone, a singing waiter at Blackie Joe's New York night club, wins fame as a composer of popular songs. Grace, the cigarette girl at Blackie's, who loves Al without his knowing it, is left behind. He marries Molly Winton, a ballad singer, and makes her famous, too. She does not love him. Molly has a baby, Junior, whom Al adores. Al becomes part owner of the fashionable Club Bombo, and on the night of the third anniversary of his marriage presents his beloved Molly with a diamond brooch. He does not know that Molly, while approaching the club in her limousine, was ardently kissed by his friend, John Perry, who begged her to leave Al. On the way home with Al she is moody. When she sees Al later in the nursery bending devotedly over sleeping Junior, his baby son, her conscience bothers her. This, in turn, makes her angry at her husband.

CHAPTER XIV.

Al heard Molly's step and turned to embrace her. She deftly avoided his grasp, stifling the look of aversion in her eyes as she did so. Al thought nothing of it; he believed she was merely anxious to avoid any noise that might wake Junior. Again he made a move as if to touch the child, but Molly caught his hand.

"Sh!" she murmured in an irritated voice. "Don't wake him. I'm tired. He might cry."

Al pretended in earnest pantomine that he had no intention of waking Junior, but, unseen by Molly, his other hand crept toward the protruding toe of the boy. The truth was Al couldn't bear the thought of going to bed without a word or two with little Junior. So as Molly turned away to go to her own room Al nudged the baby's foot and smiled to himself. Junior's eyes opened sleepily and, as he recognized his father, he murmured, "Hello, daddy."

At the gentle words Molly turned, a smile stealing over her face in spite of herself. There stood Al, pretending surprise that Junior had awakened, but obviously delighted that it had happened. He quickly leaned over, gathered the baby in his arms and straightened up with the child held close to him. One chubby, soft arm went round his neck.

"Good boy, daddy," whispered Junior, snuggling closer. "Came home."

Swiftly Al carried his precious bundle toward Molly, who waited, a look of indecision upon her face. She wanted to see Junior and cuddle him, too, yet the sight of his innocent baby face at this moment sharpened her guilty thoughts and aggravated her irritation toward Al. But Al was holding Junior toward her, so there was nothing to do but take the child in her arms.

"Be more careful," she whispered petulantly. "You're spoiling my orchids."

Al noticed her tone and quickly took Junior from her. But as soon as she had left the nursery and Junior sat down on his father's lap, the baby began to chat volubly. He was thoroughly wide awake and Al forgot his chagrin over Molly's irritability in his delight over Junior. Was any sound as sweet as that high childish treble?

"How big are you, Junior?" he asked.

The baby's tiny arms were spread wide as he gave the required answer:

"So-o-o big!"

Al's head went back, as he laughed delightedly, just as if they had not gone through that nursery ritual a thousand times. Then Junior turned and demanded, "Now, daddy, tell me story."

"Story?" repeated Al. "What kind? Animal story, giant story?"

"Frog story," answered Junior briefly, settling down comfortably in Al's protecting arms.

"All right," agreed the father. "Now listen closely. Once there was a fat old froggie who lived in a hole in the ground under a great big tree. He had a big deep voice and—"

Al glanced down—Junior's eyes had closed. He tried desperately to hold them open, but again they went shut as the story continued. . . . When the tale was ended he was sleeping quietly. Then Al, singing to him softly, put him back into his bed and tucked him in. His toy was placed beside his open hand where he would see it first thing in the morning, and then — one last adoring look, a quick kiss, and Al tip-toed from the room.

Molly had disrobed the moment she reached her room and slipped into a negligee. But her door was open and, as she went about the business of cold-creaming her face, she could not help but hear the sounds of joy and perfect comradeship that came from the nursery. Somehow, they cut into her consciousness like acid on a raw wound, so that she quite forgot what she was doing. The anger she had felt and stifled when she entered the apartment now returned in greater force than ever. It seemed to her that everything that Al had done tonight irritated her. Even his presentation of the brooch had a bad conclusion, for it had made John Perry discreetly withdraw from the party. And Al's pride in her and love for her, instead of soothing her vanity, worked just the other way.

At this moment she glanced in the mirror to see Al approaching from behind, his face aglow with that same expression of joy and devotion. As he came closer and slipped his arms around her she jumped up and stepped out of the embrace, making no attempt to hide her displeasure. Before Al could say anything in protest she had crossed the room.

He shook his head in astonishment. Oh, well, he thought philosophically, it was just another of Molly's moods. He made a move to cross over to her, but suddenly Molly's white arms went above her head in protest. She stood glaring at him, like an animal at bay.

"What's the matter with you, Molly?" he asked sharply, in amazement. "What have I done? For weeks you haven't seemed like yourself!"

There was challenge in Al's voice, but there was pleading, too. The expression of aversion left Molly's face; desperately she struggled to think of an explanation that would smooth things over. But it was no use—she had gone too far; there was no turning back.

"What is it, darling?" Al pleaded. "Can't you tell me? Haven't you everything to make you happy — a beautiful home—a baby—me?"

But Molly seemed to grow harder with every word he uttered. Her icy silence, as she confronted him with gleaming eyes, sent a dreadful current of fear through him. Was there nothing he could say to arouse her—to drive out this evil spirit and bring back the Molly he loved. He said with a controlled quietness that gave no hint of his madly throbbing heart:

"You act as though you didn't love me—any more. Don't you?"

At that Molly's head came up. It was as if she had been waiting, trying to force him to a show-down. Now she was ready to speak.

"I don't love you any more."

The dreadful words were spoken slowly and soberly, but the minute they were out a look of disdain curled her lips and her eyes flashed defiance. Now—at last—she had come clean. Now, her attitude said, what was he going to do about it?

Al recoiled as if she had struck him across the face with a whip. The words seemed to travel swiftly down interminable corridors in his brain, and come echoing back.

But finally Molly could stand the silence no longer.

"You heard me!" she exclaimed harshly. "I meant it. I don't love you! Do you understand? I don't love you! Now let me alone!"

The last remark was shot at him with deadly aim and purpose, as she might have thrown a burning, blinding faggot. It was all over now, she thought; there would be no more pretending on her part. This was the climax of the storm that had been gathering force within her for more than a year. She didn't love him; in fact, she hated him now with a terrible intensity because he had made her feel unworthy by loving her too much. She wanted to hurt him with all the cruelty in her power, driving forever that adoring look from his eyes.

Al did not cringe as he listened to her, yet he knew at last that their life and comradeship together were utterly smashed. His face was pale as death. But as they faced each other, eyes agleam, hands clinched, they heard another sound like the faint sweet tinkle of a bell. It was Junior's voice, calling gently:

"Mamma. Please come to me."

(To Be Continued.)

Regular Dirigible Service Is Coming

New Ships Will Be Much Speedier Than Graf Model

Dr. Hugo Eckener, skipper of the dirigible Graf Zeppelin, returning to Germany on the liner New York, remarked:

"I hope to return to America soon on a regular ocean liner dirigible and not on a tramp ship."

Dr. Eckener said a southern city, probably at Washington or Richmond, would be selected for a hangar. Mooring masts would be used at New York and Philadelphia, authorities indicated, but housing and repair of the airships would be made at the southern base, where milder weather prevails.

The first trans-Atlantic route would be from Fredrichshafen, and possibly France, to some southern point on the Atlantic Coast, and the second route would be from the same European points with the possible addition of Seville as a port of call, to Buenos Aires, via Pernambuco, Brazil.

Actual operation of any of the lines—trans-Atlantic or trans-Pacific—cannot start, however for several years. Two years will be required for construction of new ships.

When the new ships appear, Dr. Eckener said, they will be shorter and stubbier, but speedier than the Graf. Four power cars each will carry two engines, each engine mounting a pusher and a puller propellor, and space for 24 passengers will be within the bag. More freight and mail will be sought than passengers, for whom heavy food and baggage must be carried. Passenger's fare is expected to be $1,000.

Four ships will eventually be engaged in the trans-Atlantic service and sailings from each side will take place every four or five days.

More New Words

Aviation Is Bringing Large Number Into Use

Two new words that have been taken right out of the air and without which no modern vocabulary will be complete, are to have the authenticity of print in tthe forthcoming edition of the New Standard Dictionary. They are "enplane" and "deplane," henceforth to be recognized in verbalism as the correct terms for passenger flying. The rating of the two words is impeccable, according to Dr. Frank H. Vizetelly, editor-in-chief of the dictionary, who said that their use is synonymous in air transportation with that of "entrain" and "detrain" in railway service.

Painless and perfect in their action, Miller's Worm Powders are always a safe and reliable remedy for children who show symptoms of worms. These symptoms are easily recognized in a feverish restlessness, frequently ending in convulsions. A point of notable importance is that after Miller's Worm Powders have expelled the worms, the stomach and bowels are toned up into a very healthy condition.

To Abolish Word "The"

Brooklyn Printer Invents Character To Save Space

A veteran Brooklyn printer, Robert W. Matson, has invented a character to replace the word "the." This word, he says, is the one most employed in the English language, occurring once in every fifteen words, and by the adoption of a single character for it there would be a saving of 4 per cent. of space in all printed matter, to say nothing of the conservation of time, money, energy, and whatever else burdens the world.

Kill that corn with Minard's Liniment.

The Professor—After your motion for a new trial has been denied what is the next step to take?

The Pretty Girl Student—I'd cry a little.

NEVER wait to see if a headache will "wear off." Why suffer when there's always Aspirin? The millions of men and women who use it in increasing quantities every year prove that it does relieve such pain. The medical profession pronounces it without effect on the heart, so use it as often as it can spare you any pain. Every druggist always has genuine Aspirin tablets for the prompt relief of a headache, colds, neuralgia, lumbago, etc. Familiarize yourself with the proven directions in every package.

Aspirin is a Trademark Registered in Canada

Car Accidents In Iceland

Increasing Number Of Automobile Accidents Presents a Problem

Iceland, of all places under the sun, is complaining of its growing number of automobile accidents.

Just like Chicago and New York and London, this metropolis has its careless drivers and its drunken drivers. And all of this, of course, makes for more accidents.

An auto bus took a turn in a country road too rapidly. Two passengers were killed and the others injured. Icelandic authorities hailed the driver into court, found that he conducted his bus in a most careless manner and sentenced him to a month in jail. His license was taken away permanently.

WHEN BABY IS WELL MOTHER IS HAPPY

The happy mother is the one whose baby is well—it is the laughing, gurgling baby who always brings joy to the home. When baby is ill everyone in the home suffers—not only through worry over the little one but through loss of sleep—no one can find rest with a sick baby in the home. Thousands of mothers are happy mothers because they have found the way to keep their little ones well—or if sickness does come on suddenly, as it usually does with little ones, they have found the way to speedily bring the baby back to health again. Mrs. George Kech, Lindberg, Alta., is one of these mothers and she writes as follows:—"I am the happy mother of a seventeen-month-old baby girl. Baby is healthy and strong and sleeps well at night. I give her no other medicine but Baby's Own Tablets, and she just loves them. I am never without the Tablets in the house."

Baby's Own Tablets are a mild but thorough laxative which regulate the bowels; sweeten the stomach and thus drive out constipation and indigestion and make the cutting of teeth easy. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

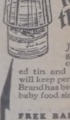

Idea May Be Feasible

Berlin To New York In Six Hours Is Plan Of Young Engineer

"Take a solid breakfast in Berlin and don't worry about food on the plane. You can have lunch in New York!"

This might be the last advice given by good friends to a passenger of a futuristic airplane not yet constructed, but planned by Heinz-Guenther Perl, a 21-year-old Berlin engineer. Perl claims that his 'plane would make the trip from Berlin to New York in about six hours, saying that world-famous scientists and experts like Professor Einstein and Count Arco studied his device carefully, approved of it and now firmly believe in its feasibility.

"Table scraps can be converted into many useful things," advises a writer. For instance, if the scrap ends in tears, the little woman can convert it into a spring hat.

Keep it this way

"Electric Man" Puzzles Doctors

Receives Shock When Using Telephone Or Radio Headphones

Frederick Stone, a chauffeur at Holsworthy, north Devonshire, England, is so charged with electricity that:

(1) He cannot use a telephone or wear a radio headphone without receiving a shock, and

(2) He cannot drive his automobile or walk without wearing vulcanite insulation pads in his shoes, and

(3) He can locate buried gold, silver and copper.

This strange "electrical" man has spent 20 of his 49 years in hospitals puzzling doctors.

A phone test of his divining powers has been held at Plymouth Municipal Museum under the supervision of the curator. The electric man located without trouble buried nuggets of gold, gold-bearing quartz and even gold jewelry.

Stone finds hidden gold and copper by means of a wand consisting of an ordinary steel clock spring. This twists and wriggles in his hand like a snake when he approaches buried treasure. The number of wriggles denoted the number of feet he is away from the exact spot.

Discussing his unusual gift, Stone said that these divining spells put a great strain upon him and were always followed by periods of intense lassitude.

"The only way I can get relief from the electric currents when I am thus overdone," he said, "is to touch wood.

"I enjoy listening to the wireless by loud speaker, but as soon as I put on a pair of headphones I feel physical helplessness as if I had received a blow on the head. I cannot use a telephone without intolerable discomfort.

"I once wore my wife's wrist watch and it came all to pieces. I must be supercharged with electricity."

Little Helps For This Week

"Watch therefore, for ye know not what hour your Lord doth come."—Matthew xxiv. 42.

Think not I dread to see my spirit fly
Through the dark gates of fell mortality;
Death has no terrors when the life is true;
'T is living ill that makes us fear to die.

—Omar Khayyam.

When the hour of death comes,—that comes to high and low alike,—then it's na what we hae dune for ourselves, but what we hae dune for others that we think on maist pleasantly.

—Sir Walter Scott.

When a man dies, they who survive him ask what property he has left behind. The angel who bends over the dying man asks what good deeds he has sent before him.

—The Koran.

Pity the Editor

A Difficult Matter To Be Popular With Everyone

It is likely editors are the most unpopular people in the world. If they try to please one group, they offend another. If they express honest convictions, which they usually do—narrow critics to the contrary notwithstanding—they are by many misjudged and discredited.

If perchance, at rare intervals, an editor hears of no error that has crept in or feels no assault on his idea of what should or should not be published, he is profoundly relieved—almost happy. He does not need commendation for any meritorious thing he has written or done to make him measurably satisfied wtih life. All he needs is freedom from the sharp stabs of those who are looking for imperfections or grounds for disagreement. There is no closed season, and often he is lambasted without knowing it, but if he doesn't know it, he is not hurt, and he may even imagine he has escaped by unanimous consent.

We would counsel the young who contemplate journalistic careers to develop thick and tough hides as a preliminary step, and leave behind all desire to run for office, or to win in any other form of popularity contest.—Benson, Minn., Monitor.

The Coming Era

The air age will have fully arrived when trans-oceanic flights are made without the accompaniment of big headlines in the papers.

"Ain't you going to get up and fight? I told you you've got him going."

"That's all right, you tell me when he's gone."

You can take lessons by mail to increase your will power or you can practice getting up at night for another blanket.

The oldest known "newspapers" were published in Rome about 690 B.C., and were marble slabs posted like bulletins in public places.

There are no windows in the Bank of England except for the openings above the entrance.

Minard's Liniment — Used for 50 years.

Dyeing this way *makes faded* Dresses NEW

DIAMOND DYES are the finest dyes you can buy. They are made to give you real service. *They contain the very highest quality anilines that can be produced.* It's the quality of the anilines in Diamond Dyes that give such soft, bright, new-looking colors; that make them go on so evenly—without spotting or streaking; that enable them to keep their depth and brilliance through wear and washings. Next time you have dyeing to do, try Diamond Dyes. See how easy and simple it is to use them. *Then compare results.* You will surely agree Diamond Dyes are better dyes. The *white package* of Diamond Dyes is the highest quality dye, prepared for general use. It will dye *or tint* silk, wool, cotton, linen, rayon or any mixture of materials. The *blue package* is a special dye, for silk and wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy—remember this. The *blue package* dyes silk or wool only. The *white package* will dye every kind of goods, including silk and wool. Your dealer has both packages.

Diamond Dyes *Sun Proof*

EASY TO USE-BETTER RESULTS

Diamond Dyes contain the highest quality anilines money can buy. And it is the anilines that count. They are the life of dyes; the source of their rich colors; brilliance and permanence.

Shock As a Stimulant

Swedish Farmer Found Dynamite Rock-Blasting Increased Egg Production

The London Times is authority for the statement that the capacity of hens to lay eggs can be increased by giving them a daily dose of shock in the form of a gun fired near the house. It seems that a Swedish farmer found his hens laying twice as many eggs while dynamite rock-blasting was going on in his neighborhood, and is now continuing to profit by his discovery in the method mentioned. The Times suggests that the limit of a hen's capacity will not be known until the effects of machine-gun fire have been ascertained.

This opens up all sorts of interesting speculations. If a hen increases its production as the result of shock, what would happen if a gun were fired every now and then near cows out grazing? Would it be worth while to test the effect of shock on pigs? Is there any possibility that the number of grouse or of other game birds could be increased to any system of periodical shocks? Above all, would some shock method have any stimulating effect upon the schoolboy in the classroom, or upon the stevedore on the waterfront, or upon the riveter on the big steel beam? This is an age of marvels, and he is a bold man who will recklessly declare that any thing is impossible.

Birds cannot see blue or violet, but they do see red and infra-red.

Bulwark Of Civilization

Sir Robt. Borden Says British Commonwealth Of Nations Is a Model

The British Commonwealth of Nations stands today as a model to the League of Nations. To destroy its unity would be a crime against mankind. So stated Right Hon. Sir Robert Borden, Canada's war-time prime minister, at a luncheon of the Canadian Club at Ottawa. Sir Robert was speaking on the occasion of the entertainment by the Canadian Club of the National Federation of Canadian University Students and other delegates to the second imperial conference of students, in session at Montreal. He chose for his subject, "A Vista in Political Evolution."

Super Salesmanship

A man who owns one of those Pray-as-you-enter bungalows on Long Island entered a large sporting goods house to purchase a canoe. The salesman tried to sell him a launch. Finally he left without buying anything.

"I wanted a canoe," said the man. "The salesman got me interested in a launch. Then I became dissatisfied with a canoe and not having money enough to get a launch I didn't buy anything."

When Pain Comes

What many people call indigestion very often means excess acid in the stomach. The stomach nerves have been over-stimulated, and food sours. The corrective is an alkali, which neutralizes acids instantly. And the best alkali known to medical science is Phillips' Milk of Magnesia. It has remained the standard with physicians in the 50 years since its invention.

One spoonful of this harmless, tasteless alkali in water will neutralize instantly many times as much acid, and the symptoms disappear at once. You will never use crude methods when once you learn the efficiency of this. Go get a small bottle to try.

Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for 50 years in correcting excess acids. Each bottle contains full directions—any drugstore.

P.O. Craigmyle, Alberta. 39a

Increased Exports

The tonnage of merchandise handled through the harbour of Montreal in 1928 was greater than in any previous year. Exports alone were responsible for the greater part of the increase, being some 660,000 tons more than in 1927. Imports decreased by about 150,000 tons, due in great part to smaller importations of British coals. Domestic tonnage increased by about 155,000 tons.

—oo—

Now it is stated that medical science has lengthened life 12 to 14 years. Somehow it sounds just like those government reports telling how much more money we have than we had last month.

A noted surgeon says that public has been humbugged as to the efficacy of monkey glands. Made monkey, in fact.

Miss Dorothea Walker is leaving this week for Edmonton, where she will resume her studies at the University of Alberta.

* * *

Cecil Hewson, son of Mr. and Mrs. G. E. Hewson, north of Delia, left this week for Edmonton, where he will attend the University of Alberta.

* * *

A lengthened report of the Hand Hills Constituency Women's Institutes held at Wayne is unavoidably held over until next week.

* * *

Messrs. W. C. Clark and T. F. Rieger motored over to Morrin Monday morning in company with Jim and Tom, where the latter entrained en route to Edmonton.

* * *

Now that the busy season is over, you will have time to come back to God's house. Services as usual in the Baptist Church, morning or evening. You are invited to attend and will receive a hearty welcome.

* * *

Robert Rose, who has been working for W J. Barss all summer, and whose parents now reside at Hanna, left this week for Edmonton to enter the University of Alberta.

* * *

Mrs. W R. Dunlop and her small son, of Port Hammond, B.C., who has been visiting Mr. and Mrs. W. B Dunlop for some time, returned to her home on Tuesday.

* * *

Mr. and Mrs. Fred Anderson, and Miss Beatrice Anderson motored to Edmonton the beginning of this week. Miss Anderson remained to resume her studies at the University of Alberta.

* * *

George Giles, of the Starland School district, was a business visitor here last Friday. He is building a new barn and stable, having purchased the lumber from the Crown Lumber Co. at Delia

* * *

Tom Rieger, who has been on the staff of the local branch Canadian Bank of Commerce during the past year, has resigned his position and left Monday morning for Edmonton, where he will enter the University of Alberta as a freshman.

* * *

James W. Clark, formerly Town Clerk here, and latterly in partnership with Roy Anderson, proprieter of the Delia Bakery, left on Monday for Edmonton, where he will take up studies at the University of Alberta.

* * *

Messrs. Chas. Lees, A. V McLean manager of the local branch Canadian Bank of Commerce, and son went out last Saturday on a shooting trip in quest of the ducks. About a dozen fine mallards were bagged.

* * *

Mrs W. E. Fitzsimmons, whom we reported to be very ill last week was taken by her husband to Holy Cross Hospital, Calgary, on last Thursday morning's train. She was operated on soon after arrival, and is reported to have improved slightly since the operation.

* * *

R J. Wallace, near Verdant Valley, had about 100 bushels of wheat stolen from his granary recently. The granary stands about 150 rods from the road allowance. The police were notified, but after considering various clues and making enquires, no arrests have been made up to the present.

* * *

The Springwater School Fair held last Friday, 20th inst., was very successful. There were 734 entries, and a large crowd was in attendance. The judges were:—Cooking, Miss King; Sewing, Miss Scott; Vegetables, Mr. Swift; Livestock, Mr Norquay; School Work, Mr. Thurber and Mr Prime. The prize list will be published next week.

A special Rally Day program will be given by the United Church Sunday School on Sunday morning, at eleven o'clock. Parents and friends are cordially invited to this service. The offering goes to the department of Religious Education.

* * *

Remember the annual Thanksgiving service on Sunday, October 6th, and the chicken supper on Monday, October 7th. Rev. J G. Goddard of Stettler, will be the preacher, and will give the lecture on Monday evening.

* * *

During the latter part of last week the weather was fair and dry, but this week much cooler and cloudy. On Sunday night there was some snow, which melted on reaching the ground. By Wednesday rain had commenced to fall, lasting throughout the afternoon. Four inches of snow is reported at Olds.

* * *

While driving a car last Saturday morning, Mrs. V J. McNair bumped into the sidewalk opposite Mr. Fred Anderson's hardware store. The force of the impact threw the her small son Donald, sitting alongside on the driver's seat, against the windshield, smashing the glass and cutting the child about the face. No other serious damage was done.

To wind up the estate of the late E Thompson, there will be an auction sale of horses, cattle, farm machinery, household furniture, harnes, etc., on the west half of 16-31-16-w4 (2½ miles south east of Craigmyle), on Tuesday next, October 1st, at one p m. sharp. The land will also be offered for sale at an upset price, on day of the sale. Terms, cash. W. C. King, Delia, is the auctioneer.

* * *

Mr. and Mrs. Jack Brown, former residents of this district, but now residing in Glendale, California, were visiting here during threshing. Mr. Brown generally arrives each fall in time for threshing, and owns his own outfits. The season this year was short, but he took the opportunity of repairing and thoroughly overhauling all his machinery in readiness for future use. Mr. and Mrs. Brown left for their home in California on Saturday last, 21st inst.

New Alberta Road Map Being Prepared by Motor Ass.

Preparing of a new Alberta road map which will be of extreme value to motorists and tourists is now being conducted under the direction of officials of the Alberta Motor Association. It is likely that this map will be 24 by 20 inches in size, while it will be carefully checked and up-to-date in every particular before it is issued for general distribution.

It is some two years since the Alberta road map was last issued, and numerous changes in routes have been made since that time. New roads have been built and others extended, making it necessary for a dependable map to be prepared just as soon as possible.

A new map is being prepared for the Peace River district, where the highway is being completed by the Provincial Government. This will be separate from the provincial road map, and of a size which will be about 9 by 12 inches. In view of the fact that the northern highway is being steadily improved and the volume of traffic is growing, there is a need of the road map being as accurate as it is possible to make it.

Within a few days a new map of the highways from Edmonton to Chauvin and Provost will be distributed. Early next year new maps will be issued in respect to the routes from Lacombe and Red Deer to the eastern border of the province.

Health Service of the Canadian Medical Association

TUBERCULOSIS IN CHILDREN

At the last annual meeting of the Canadian Public Health Association, Doctor R. M. Price reported the results of a research which is of public interest. This research was concerned with the important subject of the spread of bovine tuberculosis, that is, the type of tuberculosis from which cattle suffer and which also attacks children.

From the report the following statements are quoted:—"The incident of bovine infection in man, therefore, depends upon the amount of tuberculosis in cattle from which milk is obtained, and the amount of raw milk consumed by children." "In Canada, about five per cent. of cattle tested react to tuberculin." "The younger the individual, the greater is the probability of the infection through the milk consumed, and the more likely is the case to be due to the bovine type."

In a group of 148 children studied, the bovine type of tuberculosis was found in 20 of them. Of the 128 children who showed infection with the human type, most of them gave a history of living in contact with a case of pulmonary tuberculosis. In many of the bovine cases, there was a history of the use of raw milk, and, in most cases, the relationship to milk was shown.

The important and most instructive practical point is that all of the children who had the bovine type of the disease came from places where the milk supply was not pasteurized. The group studied included a number of children living in the City of Toronto, and not one of these children had the bovine infection. The milk supply of Toronto has been pasteurized for a number of years.

It is hardly necessary to draw conclusions. It is evident that, by pasteurization, we can eliminate the bovine type of tuberculosis, which is responsible for quite a percentage of tuberculosis among children who use raw milk. Disablement, disfigurement, suffering and sometimes death are the results of bovine tuberculosis in children. Pasteurized milk is safe and its use safeguards children from many diseases, including bovine tuberculosis.

Questions concerning Health, addressed to the Canadian Medical Association, 184 College Street Toronto, will be answered personally by letter.

Premier MacDonald to be Guest of the Dominion

Premier Ramsay MacDonald will be the guest of the Government of Canada at an official dinner in Ottawa when he visits the Dominion after his conversations with President Hoover. This was stated by Premier Mackenzie King. Mr. King said that he was quite satisfied that Premier MacDonald will make only one speech during the three or four days he is in Canada. That speech will be made at the Government dinner, and if Mr. MacDonald has anything to tell the Canadian people about his discussions with President Hoover, he will probably tell it on that occasion. The British Prime Minister will be the guest of the Governor-General while he is in Ottawa.

Mr. King said that he had been advised that Mr. MacDonald will leave Washington on October 15. Whether or not he will come to Ottawa via Montreal or via Toronto, Mr. King does not yet know, and has not made any arrangements yet to go and meet the British Premier. He said, however, that he would be happy to do so if there was an opportunity. As Mr. MacDonald has been having a very strenuous time in Europe and will probably be busy during his stay in the United States, the desire is to permit him to rest as much as possible while he is in Canada. For this reason, he will make only the one speech referred to by Mr. King. The Labor Prime Minister will probably visit Toronto, Montreal and Quebec, in addition to Ottawa.

LORD ARNOLD ONE OF PARTY

It is understood that the only companion of Premier Ramsay MacDonald, besides his daughter Isabel on his trip to Washington, will be Lord Arnold. Lord Arnold is Paymaster-General of the Labor Ministry, but was an influential member of the Liberal party until 1922. He is regarded as one of the closest personal friends of Mr. MacDonald.

Drive It... and let your own experience sell you

No one who has sat behind the wheel of the New Chevrolet Six could ever be contented with less than the quality . . less than the performance that this outstanding SIX provides.

For Chevrolet is the lowest priced six in the world with this remarkable combination of fine car features:—

Body by Fisher, with deep, richly-upholstered cushions, Fisher VV Windshield, Ternstedt Fittings, fashionable Duco colorings, smartly beautiful design.
Six-cylinder valve-in-head engine, of high-compression non-detonating type, with the extra efficiency of "direct firing" and swifter pick-up due to automatic accelerating pump.
New design, ball-bearing steering gear, giving marvelous handling ease.
Efficient braking system of non-locking four-wheel brakes and independent emergency brakes.
Long semi-elliptic, shock-absorber springs, parallel with the frame.
Modern Convenience Features, twin-beam headlights, foot-controlled; high-speed window regulators; indirectly-lighted instrument panel, including electric temperature gauge and theft-proof Electrolock.

And all these, plus the established economy and staunch endurance for which Chevrolet is famous, at the price of a four! Drive it and let *your own experience* sell you on Chevrolet Six! C-21-9-29C

IT'S BETTER BECAUSE IT'S CANADIAN

AMBITIOM

Ambition is a vulture vile,
That feedeth on the heart of pride,
And finds no rest when all is tried.
For worlds cannot confine the one,
Th' other lists and bounds has none
And both subvert the mind, the state,
Procure destruction, envy, hate.
—S. Daniell.

God commandeth his love toward us, in that while we were sinners Christ died for us. Rom. 5. 8.

The earth is flat and its products insipid to the person who has had a kink put in his aspirations.

The average person can usually think of a number of clever things when it is too late to make an impression.

A crank is a man in whom an idea has been confined to solitary confinement.
